AIR CONDITIONING SOLUTIONS

Packaged Rooftop Units

Cooling Capacity 22-215 kW - Heating Capacity 24-229 kW

50/48 UC-(V) / UP-(V) R454B & R410A

50/48 UC-(V)/UP-(V) R454B & R410A Packaged Rooftop Unit

All In One Packaged Solutions

The 50/48 UC-(V)/UP-(V) Carrier rooftop units are designed to meet diverse demands, available with R454B & R410A models and fully aligned with Ecodesign standards (EU 2016/2281). The 50/48 UC-(V)/UP-(V) Carrier rooftops comply with Ecodesign 2021 efficiency requirements with high seasonal efficiency (SEER, SCOP)**

13 different models between 25-220 kW

Unit Duct Connections

Air Duct Connections in 3 Different Ways

Carrier new generation rooftop units are designed to meet all customer requirements for air duct inlet and outlet connections.

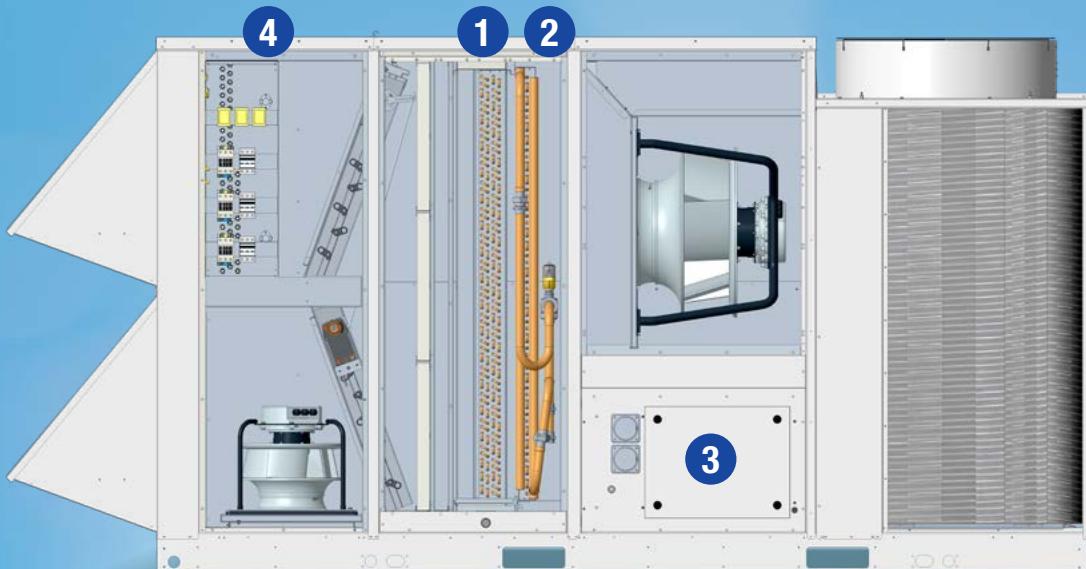

The flexible design allows air duct connection to the unit in three different way on both supply and return air side.

Supply				
Reference	Option No	Duct Connection Way	With Natural Gas Heater	Without Natural Gas Heater
S1	Standard	Bottom Supply	Yes	Yes
S2	231	Side Supply	No	Yes
S3	232	Top Supply	Yes	Yes
S4*	233	Side Supply via Top Plenum	Yes	Yes
S5	234	Face (Rear) Supply	No	Yes

Return

Auxiliary Heating Components

1 Electric Heater

4 stage electric heater can provide precise control of the indoor comfort condition by meeting the heating load of the building in cooling only and heat pump units. Four temperature limit switches provide additional safety.

2 Hot Water Coil

It is supplied with shut-off valves and 3-way proportional control valve. Valve opening of 3-way valve are adjusted according to supply temperature and 100% modulated (0-10 V) control can be achieved. Frost protection thermostat prevents the coil from freezing in winter time.

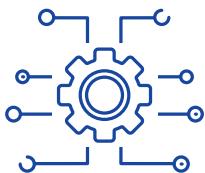

3 Natural Gas Heater

Natural gas heaters with high efficiency, low NOx emissions and the latest condensation technology, it is possible to keep indoor air in ideal conditions in winter. Thanks to its flexible design, the supply air duct connection can be made from bottom, top, or side of the unit with a plenum, even if the natural gas heater option is used. With combustion efficiency up to 109% and condensing technology and proportional control between 22%-100%, it consumes natural gas at the rate of heating demand.

4 Electric Pre-Heater

The electric pre-heater is placed before the economizer fresh air damper to pre-heat fresh air depending on outdoor air conditions. Shielded electric resistance heaters are fully factory-wired and tested. Each stage is protected against overloads by two thermal protectors. The low limit protector with automatic overload protection and is set to 90°C.

Technical Insight

DOUBLE SKIN INSULATED PANELS

ENERGY RECOVERY OPTIONS

Rotary:

- Enthalpic or Sorption
 - Fresh air up to %100
 - Eurovent certified heat exchanger
 - Easy installation without ducts
- Thermodynamic:
- Additional independent refrigeration circuit

EC PLUG SUPPLY and RETURN FANS

- High efficient operation without belt and pulley
- Building pressure control
- IE4 motor efficiency class
- Flow setting and display via controller

THERMOSTATIC or ENTHALPIC ECONOMIZER

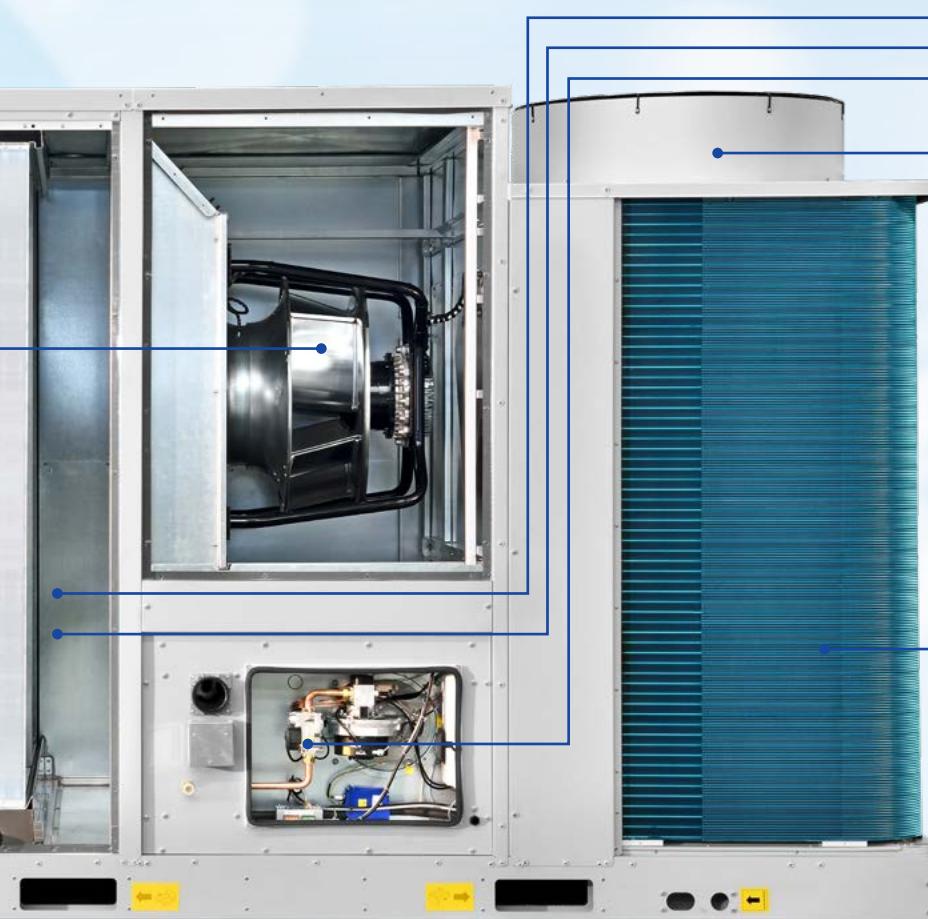

- Smart free cooling
- Fresh air control
- Possibility of indoor CO₂ control

TWO STAGE FILTRATION SOLUTIONS

- G4
- F7
- G4 + F7
- M6 + F7
- F7 + F9

REMOVABLE STAINLESS STEEL DRAIN PAN

- Sloped and bottom insulated
- Supplied siphon with ball

AUXILIARY HEATING OPTIONS

- Multi stage electric pre-heater
- Multi stage electric heater
- Proportional control hot water coil
- Proportional control condensing natural gas heater

FLYING BIRD VI™ CONDENSER FANS

- Carrier patented direct drive axial fans
- Two speed, quiet operating, night mode
- Special algorithm for fan speed control

CU / AL CONDENSER / EVAPORATOR COILS

- 6-stage flow circuit leak control tests in factory
- Polyurethane coating option for extra UV and corrosion resistance
- AquaAero coating for high durability alternative

HIGH EFFICIENT SCROLL COMPRESSORS

- Inverter or 4 capacity stages

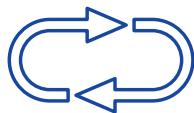

ADVANCED CONTROL BOARD

- Single point power supply
- Coloured and numbered cabling
- Control box cover cannot be opened until power switch is turned off
- IP68 cable inlet-outlet
- Energy Meter option
- Leak detector option (standard in R454B)

SMARTVU™ SMART CONTROL INTERFACE

- 4.3" user friendly touch screen coloured HMI
- All major parameters are displayed on one screen visualization
- Possibility of control from anywhere in the world via Internet
- Sending alarm to predetermined e-mail address

Energy Recovery

Rotary Energy Recovery Module (ERM)

It is a high efficiency rotary energy recovery that allows the exhaust air to be recovered by transferring the energy to the fresh air.

The rotary type energy recoveries are the most efficient energy recovery systems. In particular, it is much more advantageous than other energy recovery systems when the temperature difference between the ambient air and the return air is high and fresh air is more used.

The rotary energy recovery allows maximum heat transfer either as an enthalpy or sorption type, either in fresh air ratio or in different types depending on the ambient air conditions. The rotary energy recovery is used in rooftop unit has also Eurovent certification. The site setup of the energy recovery module is quite simple. The main unit and the power supply of the ERM are made from the single point on the unit. There is an additional G4 filter to protect the rotary in the fresh air inlet.

Eurovent
Certified
Performance

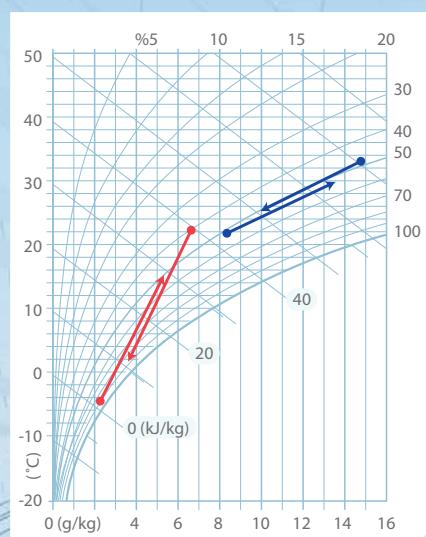

Condensation Type

Enthalpy Type

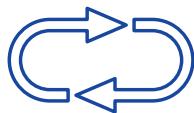

Sorption Type

As can be understood from the graphs above, the enthalpy rotary permits latent heat transfer in particular amount while the latent heat transfer is not observed in condensation type energy recoveries in summer time and high amount of latent heat transfer can be achieved with the sorption type rotary energy recoveries (depending on the humidity of the ambient air).

● → Winter Operation
● → Summer Operation

Thermodynamic Energy Recovery (THR)

Thermodynamic energy recovery is an additional independent refrigerant circuit energy recovery system that includes a DX coils on the exhaust and supply air side, a compressor and an expansion valve to recover energy by transferring the energy from exhaust air to the supply air.

It is more advantageous than other energy recovery systems, especially at seasonal passages and by

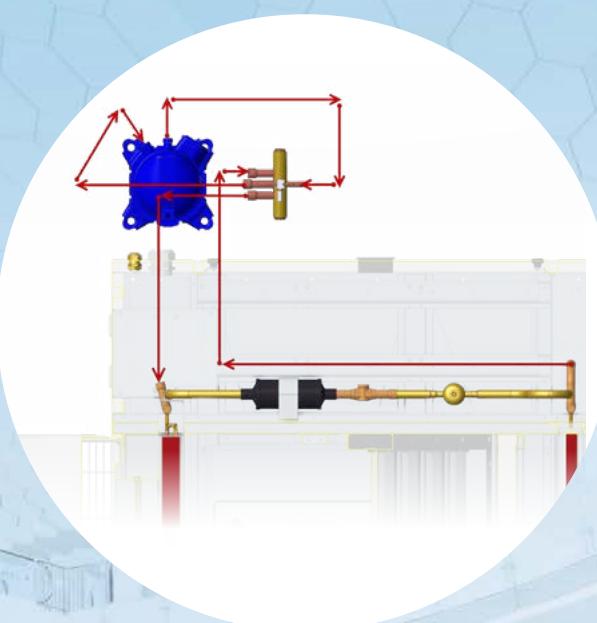

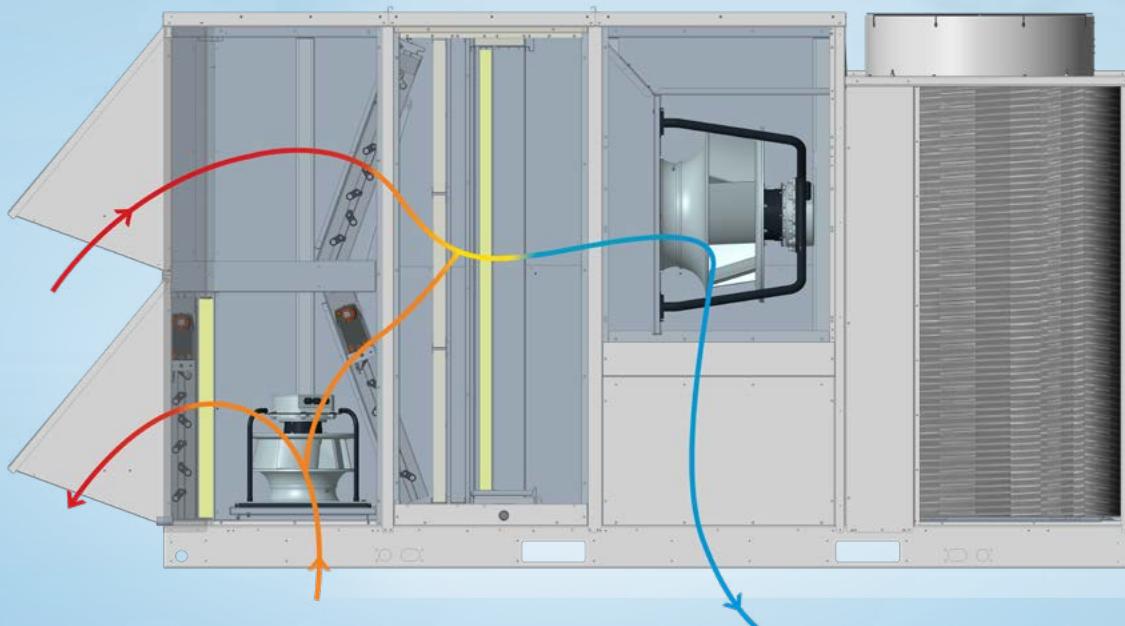

providing stable energy recovery at times when the temperature difference between indoor and ambient air is not too high. Fresh air ratio can be 20-100% in THR mode. As the energy recovery system is integrated into the unit, the unit dimensions do not increase. Depending on the amount of fresh air, 25% to 40% of the unit capacity is provided with energy recovery. The advanced controller can operate in accordance with the free cooling mode depending on the room load requirement.

*Nominal Eurovent conditions: outdoor air dry bulb temperature of 35°C, indoor air wet bulb temperature of 19°C.

**Nominal Eurovent conditions: outdoor air wet bulb temperature of 6°C, indoor air dry bulb temperature of 20°C.

***According to Commission Regulation (EU) 2016/2281 and related standard EN14825:2022.

****Natural gas (G20) net calorific value 34,02 MJ/m³ @ 15°C, 1,013 mbar.

*****Weight and power input values are valid for the heating modules.

Options

ADDITIONAL HEATERS: Condensing Gas Burner, Electric Heater, Hot Water Coil, Electric Pre-Heater

Indoor / Outdoor Coil Coating

ECONOMIZER: Thermostatic or Entalpic; IAQ control by CO₂ sensor

High Static Pressure Fan

Energy Recovery (Rotary or Thermodynamic)

High Efficient Filtration (G4, F7, G4+F7, M6+F7, F7 + F9)

Barometric Exhaust Damper, Power Exhaust Fan and Return Fan

Temperature Sensors (T55, T56, T59 or Duct)

Smoke Detector and Fire Thermostat

Building Management System Communication Protocols (Bacnet IP, Modbus TCP/IP & RTU)

Packing

Compressor Soft Starter

Energy Meter

Leak Detector (standard in R454B)

Outdoor Coil Protection Grill

UV-C Lamp

Humidity Control

IP55 Control Panel

Accessories

Roofcurb

Compressor Blanket

Programmable and Non-programmable Room Thermostats

CO₂ Sensor

Dirty Filter Detection

Zone Controller
