

Submersible Pump

AL 6"-8" KPS Series

TECHNOLOGY GIVING LIFE TO WATER

Alarko submersible pumps are
UNIQUE INDIVIDUAL and UNINTERRUPTED WATER SOURCE
in potable water status by
• Everytime being ready to use,
• With no trouble
• And with short reimbursement term.

Alarko submersible pumps are
MULTIFUNCTIONAL
because of usable for
from detached houses
to skyscrapers and
because of obtained
advantage using it as a
water stocking
hydropore.

Alarko submersible pumps are
PROPER INVESTMENT
in providing using water
and process water in
industrial facilities and
administrations because of
• High efficiency
• And long life period.

ALARKO, ALWAYS NUMBER ONE IN SUBMERSIBLE PUMPS

Alarko submersible pumps are

RELIABLE FRIENDS

of garden lovers and farmers on horticulture, agriculture and from little house garden to agricultural land as thousands acres.

Alarko submersible pump is a

UNIQUE RELIABLE

WATER

SOURCE for touristic facilities, which especially need more water in tourism term.

Alarko submersible pumps are

PREEMINENT

because of

- High technology
- Economy
- Continual and quality service
- Quick procurement of spare part.

ADVANTAGES

- It does not have to be protected from open air conditions because motor works in the well water.
- No limitation for the depth of immersion. It can be come down to deep as total head.
- Any special tube or tool is not required.
- There is not fan adjustment problem.
- Shaft cutting or oil lack is not experienced.
- Mounting is easily and there is not any axle alignment problem.
- It is silent.
- It is not effected well inclines as pump with perpendicular shaft.
- Capability of using drill pipe of 6 5/8" instead of 8" for 70 m³/h flowrate of up to 50 Hp motor power, 8 5/8" drill pipe instead of 10 3/4" for 118 m³/h flowrate.

DESIGN

All Alarko 6" and 8" KPS pumps are made entirely of stainless steel AISI 304 (DIN W-Nr.1.4301). For particularly aggressive liquids pumps are available in extra high grade stainless steel AISI 316 (DINW-Nr.1.4401). For handling slightly contaminated water such as oil containing water we can offer all rubber parts made of Viten® as an option.

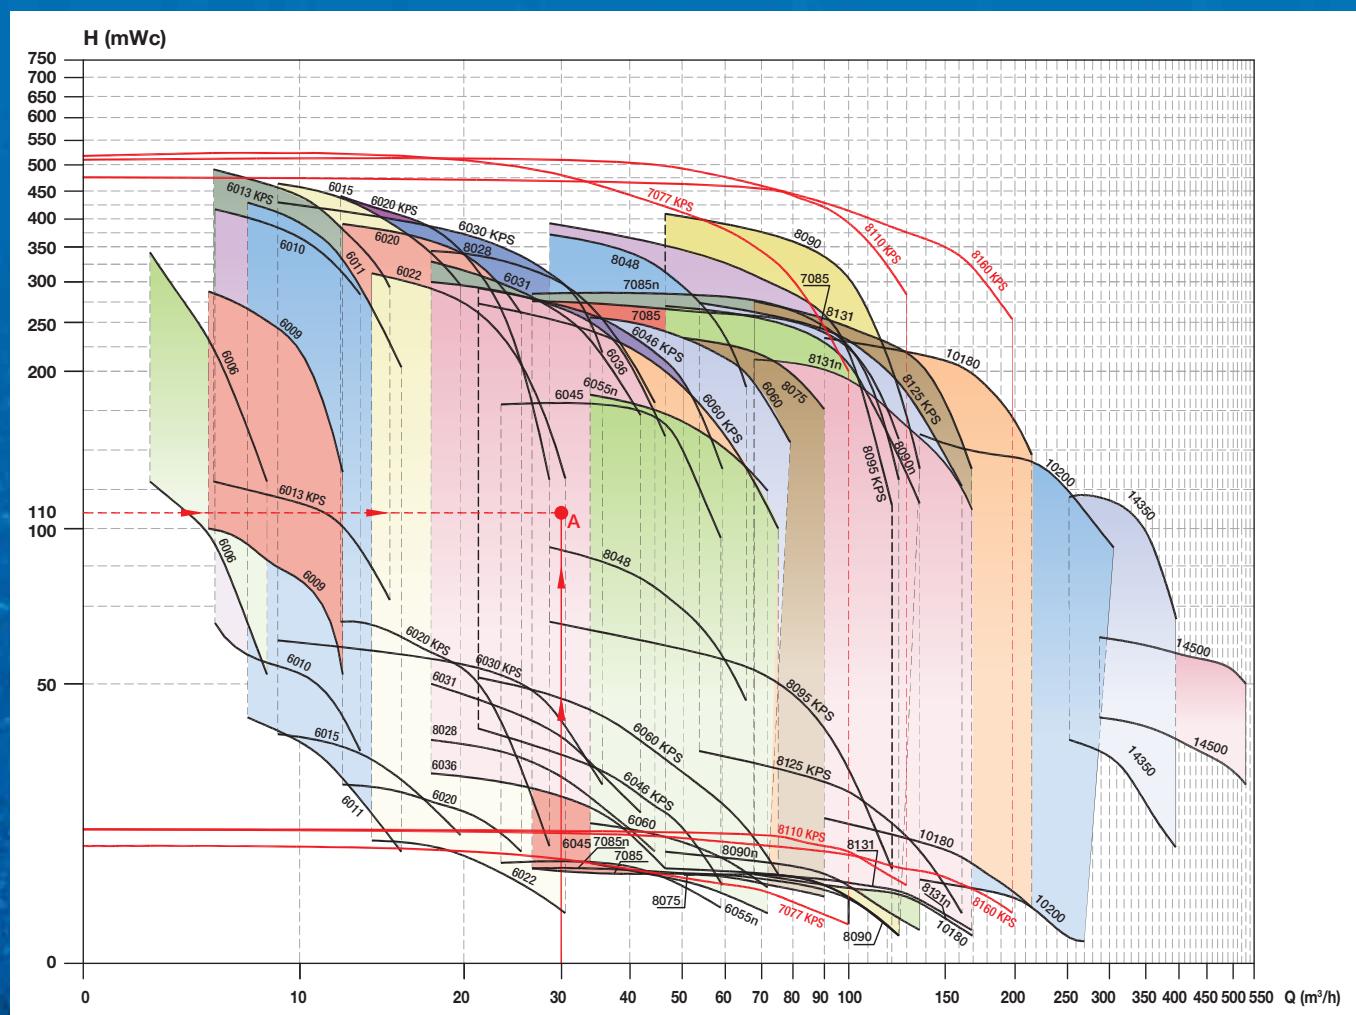

The octogonal rubber bearing and build in sand protection shields are designed to ensure that sand is removed from the pump and meter by the water that is being pumped.

APPLICATION DATAS

- Three-phase squirrel cage asynchronous water lubricated motors with powers between 10-180 HP.
- Special isolated stator which uses coil wire suitable to work under water.
- Horizontal bearing assembly that carries axial load and water lubricated radial bearing.
- Flat motor exit cable, cut in standard length, designed specially for working under water.
- Should give direct way up until 20 HP, and star-delta between 25-180 HP.
- Optional design in AL 6"-8" motors suitable for Operation with different frequency and voltage values with soft starter.
- Automatic pump activation-deactivation control according to the well water level through water level relay.
- Protecting the motor against two-phase operation instabilities with phase control relay.
- Protection of the pump from short circuit through fuses.

APPLICATION LIMITS

- Five series of 6", 8" as per pump's nominal diameter.
- Total 7 models and 55 types between 10 and 180 HP

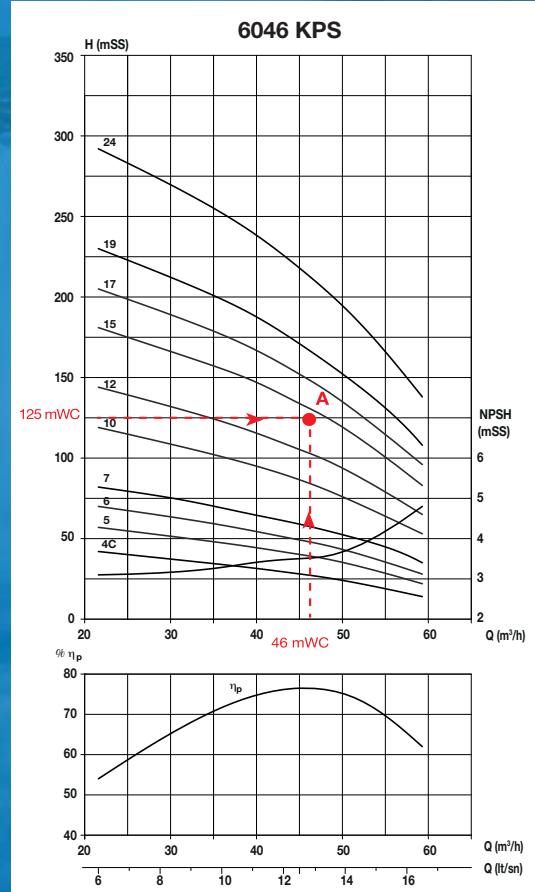

SELECTING PUMP

It is determined that requested intersection point (A) of flow and manometer height is remained in which pump's area from "General Selection Abac" In order to select pump, its "Independent Characteristic Curve" is checked Level number on the upper nearest curve to intersection point of flow and manometer head. According to determined pump type and level, motor type and power are defined from "Electrical Specifications, Dimensions and Weight Table" Pump according to "Order Notation" is demanded from Alarko Carrier vendor with determining electrical switchboard demand and electrical cable length.

SELECTION SAMPLE

Let the well diameter be 8 5/8", the flow-rate (Q) be 46 m³/hour and manometric height (H) be 125 mWc. The points of the 46 m³/hour on the horizontal axis and 125 mWc on the vertical axis are intersected on the "General Selection Chart". The intersection point (A) stays in the region of 6046 KPS type of pump. This leads us to 6046 type pump "Independent Characteristic Curve". The intersection point of the values of 46 m³/hour and 125 mWc is on 15th stage curve. The pump stage is selected as 15. The efficiency of the pump is 74%. The pump type is specified as AL 6-30 using "Electrical Specification, Dimensions and Weights Table". The order notation is specified as 6046/15 KPS+AL 6-30.

SELECTING CABLE

25 HP and above motors are star-delta. In star-delta motors, 2 of the cables with lengths specified above should be used.

MAIN PARTS

1- Valve Casing: The upper part of the pump. The pump outlet is connected to this part. Extra safety during installation thanks to specific type of ring and extended switch platform originated from material made up of precision cast 304 rustproof steel.

2-Check Valve: Prevents the water in pillar tube from reverse-flowing, which will cause the motor to overturn. Water-hammer reduces any risk of shock.

3-Upper Bearing: Coated with durable chrome material. It reduces abrasion in case the well is surrounded by harsh sand.

4-Labyrinth Rings: Contributes to the efficiency and robustness of high pumps. It has the self-aligning function. It is made up of Teflon.

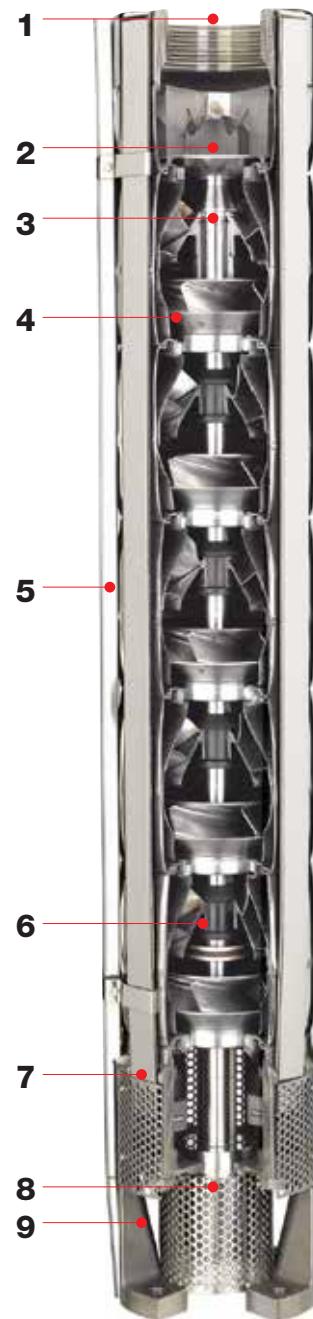

5-Cable Housing: Made up of peculiarly thinned rustproof steel. It facilitates installation in the wells with less tolerance.

6-In-Pump "Upthrust" Protection: Prevents the pump from getting damaged in case of requirement of much water and in initial launches. It maintains high durability against failures in cases of open valve and frequent stop/launch.

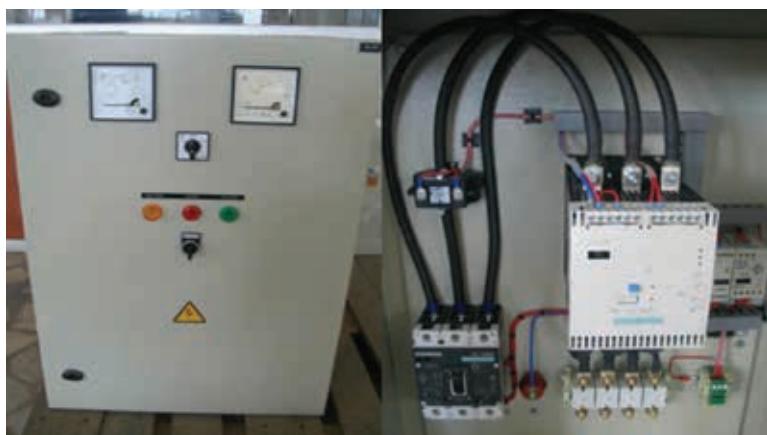

7-Suction Filter: Ensures that the pump is not damaged in case of requirement of much water and in initial launches by preventing the abrasive parts from entering into the pump. It is made up of 304 rustproof steel.

8-Coupling Protective Filter: Prevents the abrasive components from damaging coupling and motor shaft. It is made up of 304 rustproof steel.

9-Suction Case: Ensures that the pump and the motor are interconnected. It ensures excellent pump-motor connection through any type of plunger motor with NEMA standard. The water enters into the pump through the suction opening. It has a suction strainer on the upper side of it, which blocks the chunks.

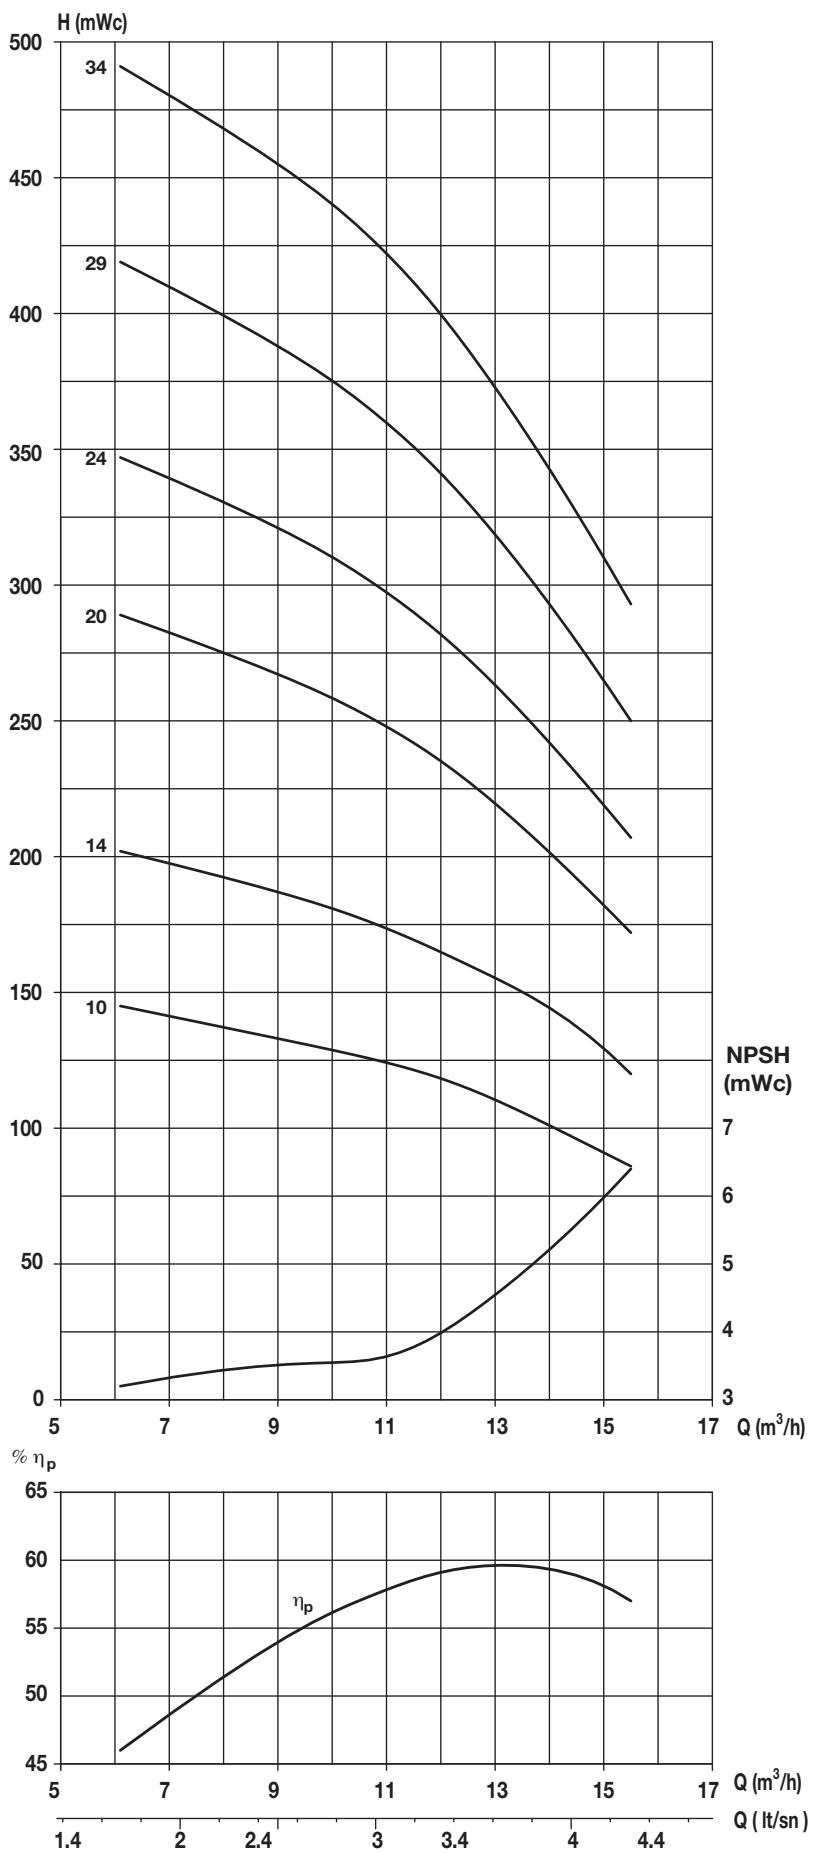

OPTIONAL ELECTRIC BOARD

SOFT STARTER CONTROL PANELS

- Reduction in control panel and wiring cost up to 25% average
- Use of single cable instead of double-wire for 25 – 180 HP motor power (Star-Delta connected)
- With the use of single cable ,
 - » An average % 20 reduction in installation time
 - » An average % 50 reduction in cable attachment
- With the use of soft starter panels
 - » Low fault rate and longer pump life
 - » Low water hammer risk
 - » High customer satisfaction

Maximum efficiency point

FOR SECURE AND EFFICIENT USES

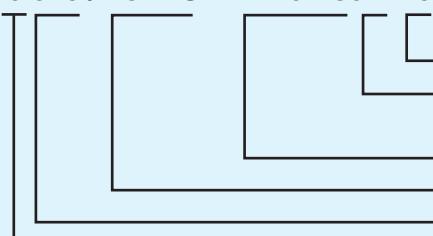

- Well water temperature and sand ratio in the well water should be controlled in the laboratory. Maximum sand in the well water should be 50 gr/m³ and well temperature should be 30°C.
- Pipes and Pipe clamps should have durability as carrying water in the vertical tube, tube group and itself weight.
- It is recommended that well diameter is bigger than pump diameter as at least 2" (inch).
- Distance between pump suction filter and well filter should be maximum.
- Distance between the bottom end of the motor and base of the well should be at least 50 cm. Length of pump in the well is determined due to this measurement.
- Since pump does not suck air, pump assembly depth should be proper to Net Positive Suction Height (minimum depth it can work at) values.

APPLICATION METHODS

Order Notation

6 046 / 15KPS + AL6 - 30 -T. 60

- Length of power cable (m)
- T: Power control board is available.
- Y: Power control board is not available.
- Motor type
- Number of stages
- Flow-rate point in maximum efficiency (m³/hour)
- Well diameter (")

Alarko plunger pumps are shipped from the factory after being packaged safely.

The packages of 6" plunger pumps include hexwrench, water filling hopper and locktite.

Control board, water level control electrodes and cable are optional. They are delivered in a separate package if ordered.

The right to amend specifications under technologic developments is reserved
