INTRODUCTION

Innovating and beautiful design, perfect to meet all air-conditioning requirements of wide environments, 2 different models, high control flexibility, easy maintenance: the new cassette fan coil unit **TopLine ECM 7-8** is the result of an extended technical and design development aimed at achieving the highest level in terms of performance, silent operation and control possibility.

The air diffuser has an highly attractive aesthetical appearance, very innovative, and is also able to offer the best air distribution performance thanks to long computer studies and laboratory tests. The standard colour is RAL 9003, other colours available on request.

The bigger sizes allow the best outcome in terms of quietness and of price/performance ratio for these high capacity models.

Every unit can be supplied with 1 coil (2 pipe system) and a possible electric heater or with 2 coils (4 pipe system). Each model can have fresh air intake and a remote air diffuser can be connected to the unit.

The float switch centrifugal pump is particularly silent, with 650 mm of maximum head.

In addition to temperature and speed standard controls, automatic speed selection is also available. More than one unit can be connected to a single control.

All the **TopLine ECM 7-8** units can be supplied in **MB** version. This version includes a wide range of controls, including the infra-red remote control, which allows managing one single unit or several units by using the Bus communication protocol. The units can be connected to the most common automatic building management systems.

In the MB version it is possible to control at the same time the (motorized) outlet louvers with the remote-control or with the T-MB wall control.

The outlet louvers position themselves automatically according to the selected operation (summer-winter) and can be managed with the swing mode, that guarantees a complete air distribution in the environment.

Both versions, the **TL-ECM** and the **TL-ECM-MB** ones can be supplied with electric heater.

The range **TopLine ECM 7-8** uses an innovative brushless synchronous permanent magnet electric motor controlled by an inverter board that is directly installed on the unit.

The air flow can be varied continuously with a 1-10 V signal from controls or by independent controllers (programmable controllers with a 1-10 V output).

The extreme efficiency, also at a low speed, makes possible a great reduction in electric consumption (more than 75% less in comparison to a traditional motor) with absorption values, under normal operating conditions, that are no greater than 20 Watt in the entire range.

The brushless motor is characterised by a constant synchronous speed, independently of the applied load, that depends only on the motor power supply frequency, which is modulated by the inverter.

it consumes less because:

- The motor always works at its point of maximum efficiency.
- in the brushless motor, the rotor's permanent magnets generate the magnetising power autonomously.
- the motor always operates at the synchronous speed, as a result there are no induced currents that reduce efficiency

The main advantages are:

- large reduction in energy consumption, thanks to an optimal response to the thermal load of the environment during every moment of the day.
- operating silence at all rotation speeds.
- ability to operate at any rotation speed.

MAIN COMPONENTS

Air diffuser

Intake grids, frame and adjustable air distribution louvers on each side, made of ABS. In the **TL-ECM-MB** version the outlet louvers are adjustable with remote control or with T-MB wall control (for the **TL-ECM** version manually only).

The intake and air distribution grids are available with both, the G0 filter and **the F7 filter**.

- RSNA Version: white ABS, RAL 9003.
- RSNB Version: in ABS one single color to choose.

RSNA Version

RSNB Version

Casing

It is made of galvanized steel with internal thermal insulation with polyolefin (PO) foam (class M1) and external anti-condensate lining.

Control panel

- **TL-ECM / TL-ECM-E** version

It consists of the pump control circuit board and the inverter circuit board.

- **TL-ECM-MB / TL-ECM-MB-E** version

It consists of the MB electronic board (that integrates pump control) and the inverter board.

The diffusion louvers are adjustable with the infra-red remote control or with T-MB wall control.

Fan assembly

The fan assembly, secured on anti-vibration mountings, is particularly silent.

The radial fan has been designed to optimise performance, using wing profile blades with a shape that reduces turbulence, increasing efficiency and reducing noise.

The fans are connected to a three phase permanent magnet brushless electronic motor that is controlled with reconstructed current according to a BLAC sinusoidal wave.

The inverter board that controls the motor operation is powered by 230 Volt, single-phase and, with a switching system, it generates a three-phase frequency modulated, wave form power supply.

The electric power supply required for the machine is therefore single-phase with voltage of 230 - 240 V and frequency of 50 - 60 Hz.

Coil

Made of copper tubes with bonded aluminium fins for maximum transfer contact.

3 row coil for 2 pipe models and 2,5 + 1/2 row coil for 4 pipe models (the heating row is on the inside part of the coil).

The heat exchanger is not suitable for use in corrosive atmosphere or in environments where aluminium may be subject to corrosion.

Condensate collection tray

High density polystyrene foam condensate tray, shaped in order to optimize the air diffusion.

Fire retardant rating B1 to DIN 4102.

Filter

Easy access to the filter that is available in both versions, in the G0 (synthetic regenerable washable) and in the F7 one (to change at the end of its life-cycle).

Condensate pump

Float switch centrifugal pump with 650 mm of maximum head, integral to the unit and wired to the control panel on the outside of the casing.

Valve set

Two or three way valves for ON/OFF operation, with pipe mounting kit and ball valves

Version with electric heater (3 kW) TL-ECM-E / TL-ECM-MB-E

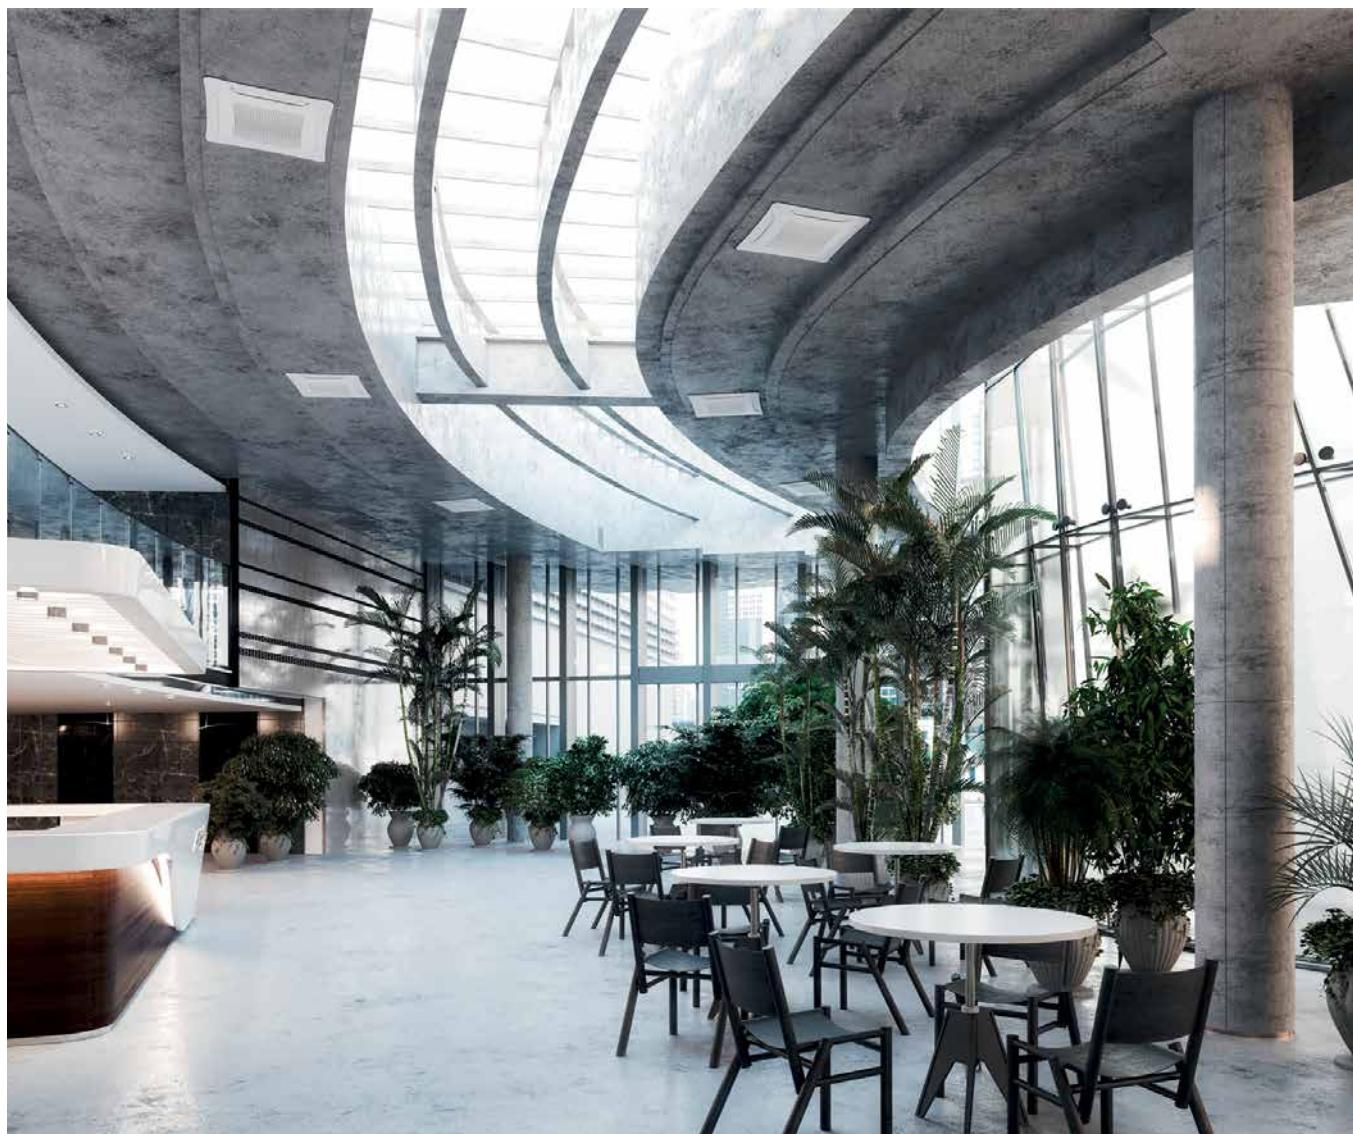

The 2 pipe model Cassette units are available with electric heater.

The electric heater is controlled in place of the hot water valve and not as integration to it.

The electric heaters are hermetically sealed and supplied inside the coil pipes and therefore can be only factory mounted.

The electric heaters of the unit can be for 230Vac 1Ph 50-60Hz or 400Vac 3Ph 50-60Hz supply.

The Cassette fan coil unit includes no. 2 safety thermostats which intervene in case of internal over- heating, opening an auxiliary power relay (included in the electrical panel) which stops the power supply to the electric heaters.

PERFORMANCES**Technical features for 2 pipe unit**

The following standard rating conditions are used:

COOLING

Entering air temperature: + 27 °C d.b. + 19 °C w.b.

Water temperature: +7 °C E.W.T. +12 °C L.W.T.

HEATING

Entering air temperature: + 20 °C

Water temperature: +45 °C E.W.T. +40 °C L.W.T.

WATER SIDE PRESSURE DROPS

2 pipe system

TL-ECM 7.2T / 8.2T

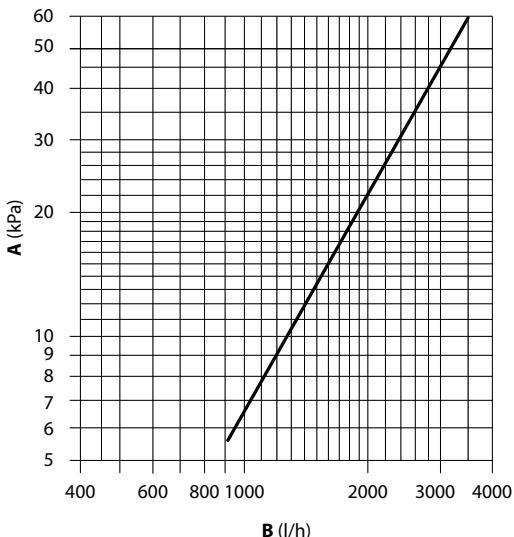

- A** Pressure drop
- B** Water flow rate

Pressure drop for mean water temperature of 10 °C, for different temperatures multiply the pressure drop figure by the K correction factors in the table.

	Mean water temperature (°C)						
	20	30	40	50	60	70	80
K correction factor	0,94	0,90	0,86	0,82	0,78	0,74	0,70

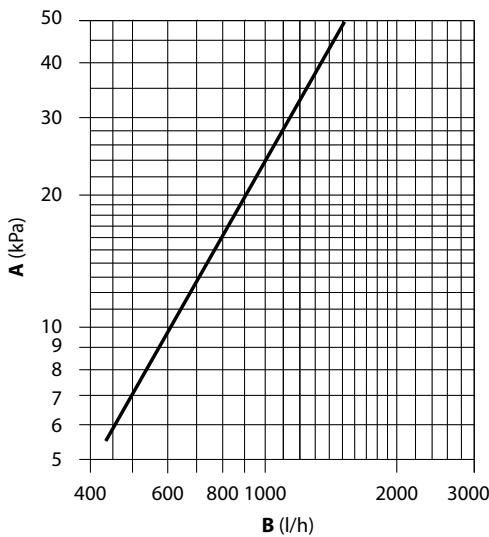

4 pipe system

TL-ECM 7.6T / 8.6T - Cooling

- A** Pressure drop
- B** Water flow rate

TL-ECM 7.6T / 8.6T - Heating

- A** Pressure drop
- B** Water flow rate

Pressure drop for mean water temperature of 10 °C, for different temperatures multiply the pressure drop figure by the K correction factors in the table.

Pressure drop for mean water temperature of 60 °C, for different temperatures multiply the pressure drop figure by the K correction factors in the table.

	Mean water temperature (°C)						
	40	50	70	80			
K correction factor	1,12	1,06	0,94	0,88			

OPERATING LIMITS

Description		UoM	Value
Water flow	Max. water pressure drop	bars	10
	MIN. entering water temperature	°C	+5
	MAX. entering water temperature mod. 7.2T - 8.2T	°C	+65
	MAX. entering water temperature mod. 7.6T - 8.6T	°C	+80
Ambient air	Suitable relative humidity	%	15÷75
	Minimum temperature	°C	+6
	Maximum temperature	°C	+40
Power supply	Single-phase rated operating voltage	V/Hz	230/50-60
Installation	Maximum height	m	See p. 15

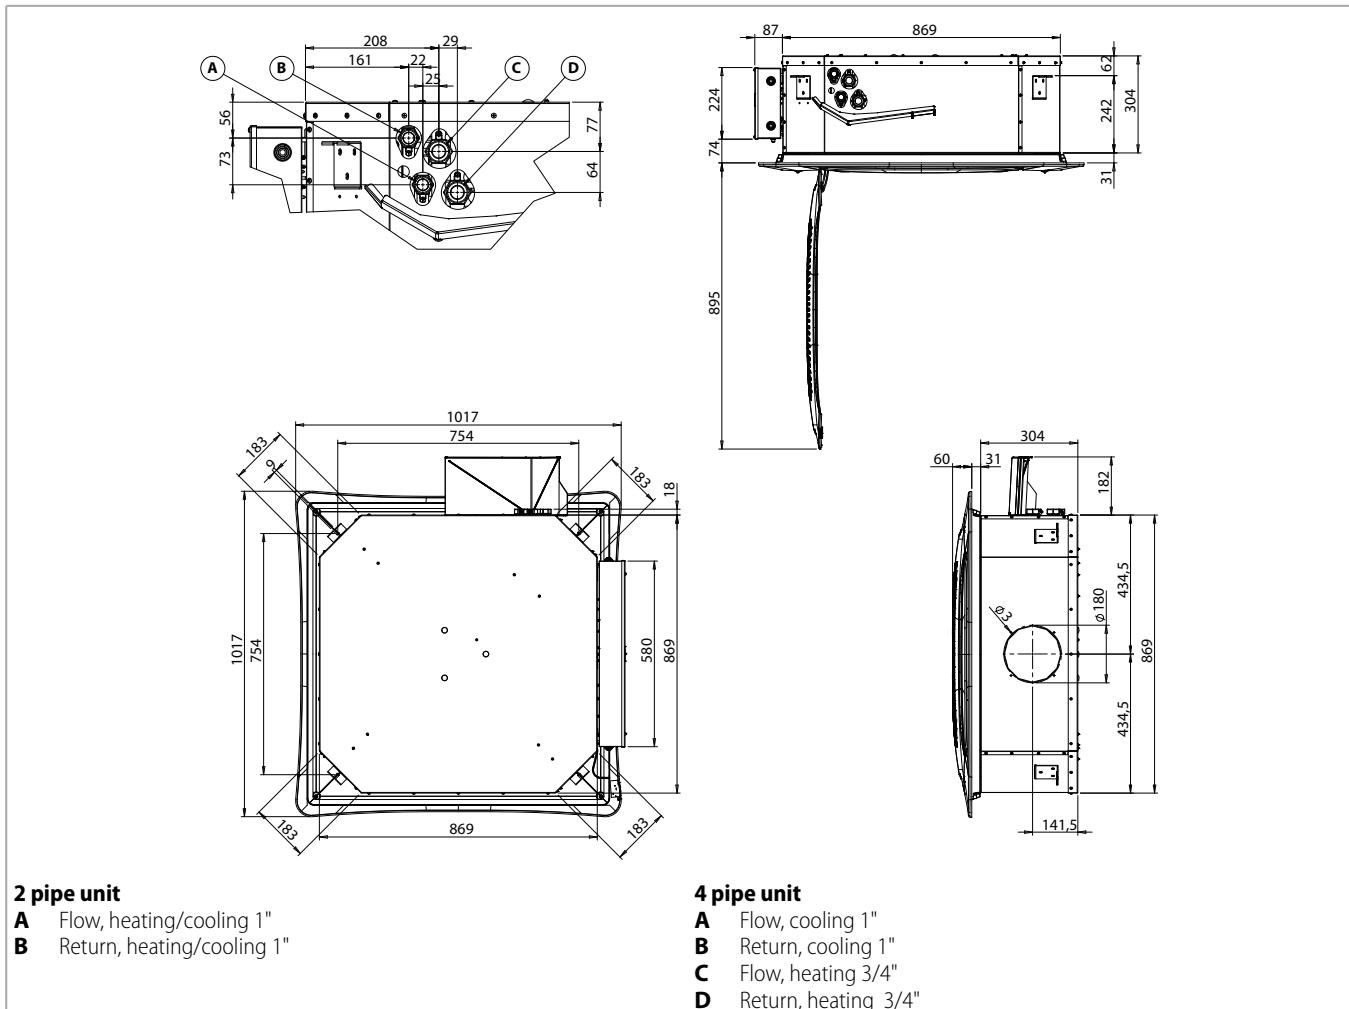

Electric heater operation limits

Description		UoM	Value
Ambient air	Maximum temperature ⁽¹⁾	°C	+25
Power supply	Single-phase rated operating voltage	Vac/Ph/Hz	230/1/50-60
Electrical installation	Rated three phase connection	Vac/Ph/Hz	400/3/50-60

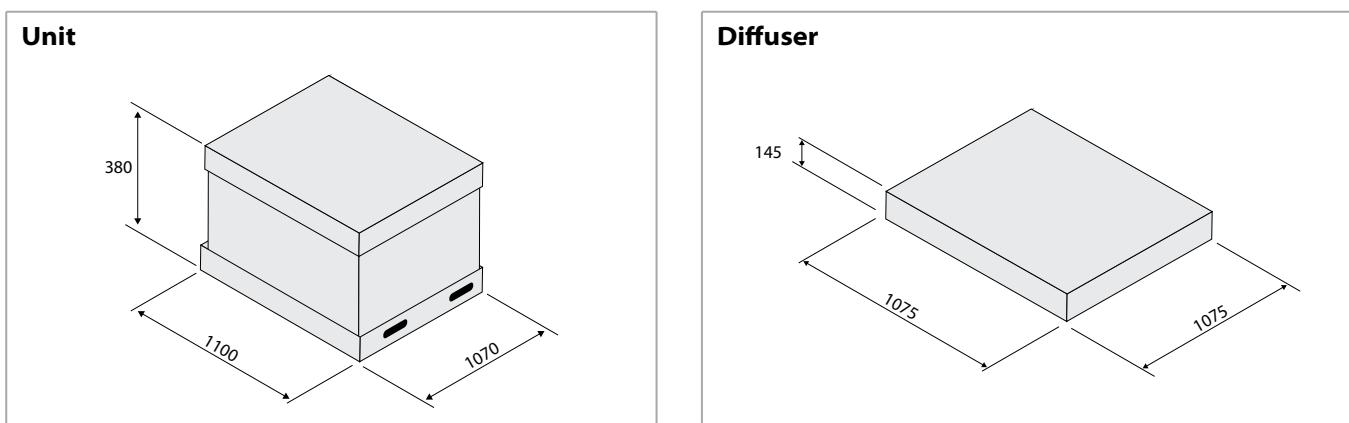

⁽¹⁾ with heating coil**Note:** the cooling emission of the units is 95% of the standard emission.

DIMENSION AND WEIGHT

TL-ECM 7.2T / 7.6T / 8.2T / 8.6T

Packed unit

Model	TL-ECM 7.2T	TL-ECM 7.6T	TL-ECM 8.2T	TL-ECM 8.6T
Weight with packaging	kg	52		
Weight without packaging	kg	42		

Model	TL-ECM 7.2T	TL-ECM 7.6T	TL-ECM 8.2T	TL-ECM 8.6T
Weight with packaging	kg	9,4		
Weight without packaging	kg	7,5		

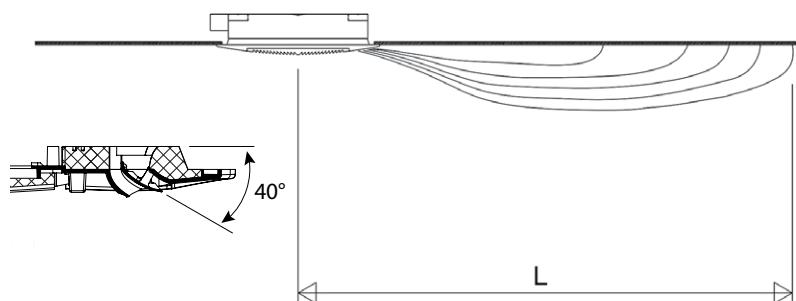

AIR THROW

The air throw indicated in the tables must only be considered the maximum value, as it may change significantly in relation to the dimensions of the room in which the appliance is installed and the positioning of the furniture in the room.

The useful throw L refers to the distance between the unit and the point where the air speed is 0.2 m/sec; if the

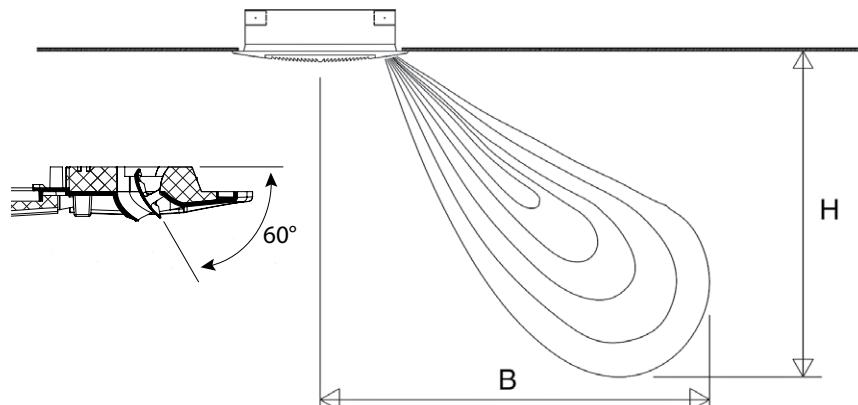

louver has a gradient of 40 ° (recommended in cooling mode), the so-called "coanda" effect will occur, illustrated in the first figure, while at a gradient of 60° (recommended in heating mode), there will be a downwards throw, as illustrated in the second figure.

With adjustable air diffusion louvers at 40°

Model	TL-ECM 7.2T / 7.6T			TL-ECM 8.2T / 8.6T		
Speed	Min	Med	Max	Min	Med	Max
L m	3,5	5,0	6,5	4,0	6,0	7,5

With adjustable air diffusion louvers at 60°

Model	TL-ECM 7.2T / 7.6T			TL-ECM 8.2T / 8.6T		
Speed	Min	Med	Max	Min	Med	Max
H m	2,8	3,2	3,6	3,0	3,5	4,2
B m	3,5	4,5	5,5	4,0	5,0	6,5

Note: on heating it must be payed attention to rooms where the floor temperature is particularly low (for example less than 5 °C). In this situation the floor can cool the lower layer of air to a level that stops the uniform diffusion of the hot air coming from the unit, decreasing the throw figures shown in the table.

ACCESSORIES

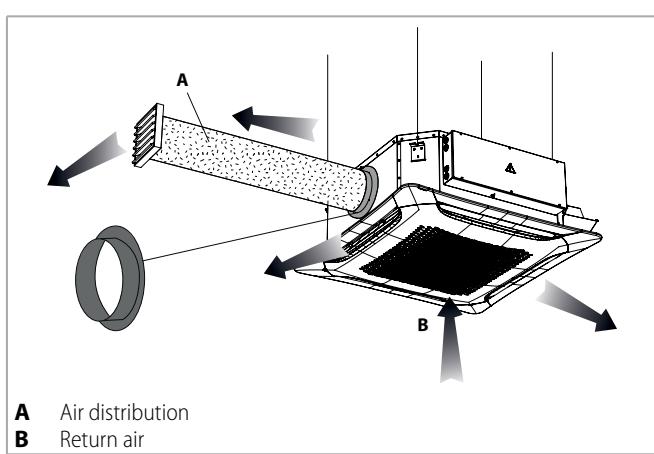

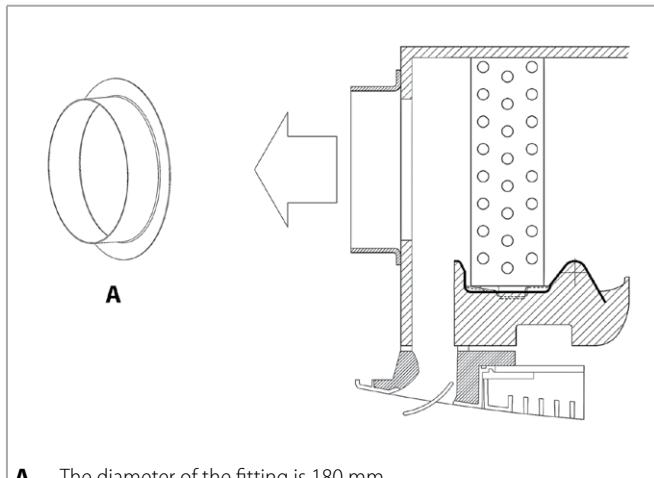

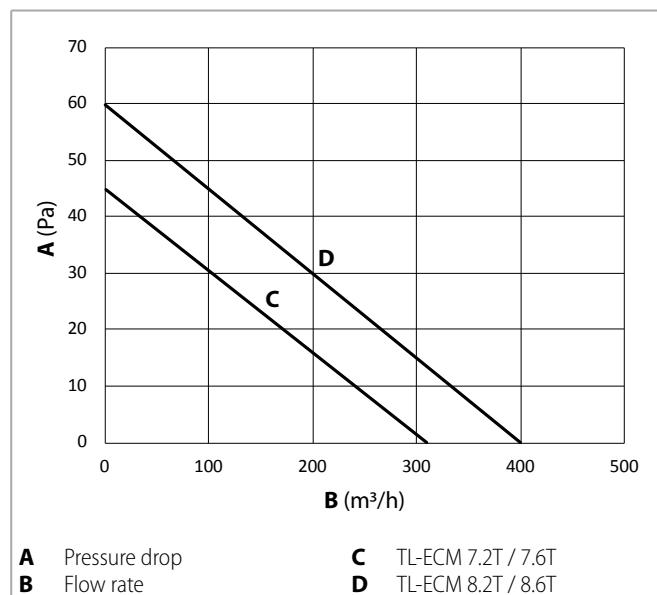

Air distribution connection

Model	Code
CDA 800	9079233

Two air outlets are provided on the side of the unit for connection to separate supply air outlets. The total air flow does not change.

The air flow at high speed depending on the air duct pressure drop is shown in the tables below.

Note: all air ducts must be insulated in order to avoid condensation.

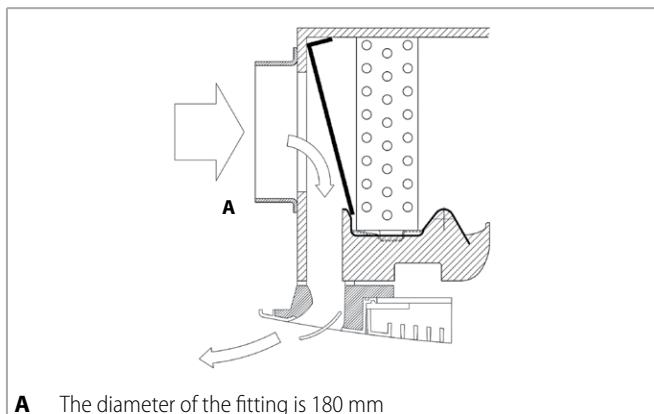

Fresh air kit

Model	Code
PRT 900	907923JUMBO

This is used to introduce fresh air into the environment directly through the diffuser.

The kit includes a flow separator to be fitted inside the cassette, and a circular fitting for connection to the flexible system ducting.

The flow of air is sent directly to just one of the outlet louvers, without passing through the coil. The air flow of fresh air introduced into the environment depends on the inlet static pressure.

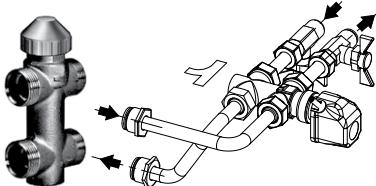

Flow rate	m³/h	160	200	300	400	500
Static pressure	Pa	3	8	15	25	36

B Water flow rate

TL-ECM VERSION

For this cassette configuration, the 1-10 Vdc signal, which controls the inverter, must be supplied by a controller with the following signal specifications:

Fan drive signal

- Fan OFF = 0 Vdc
- Fan ON > 1 Vdc
- Max. speed = 10 Vdc

Blac-ECM Inverter board

- 0÷10 Vdc Circuit Input Impedance Value= 68kOhm

Power supply

- 230Vac 1Ph 50Hz

CONTROLS FOR TL-ECM UNITS

All the units of the **TopLine ECM 7-8** range can be supplied with a wide range of controls that allows managing one single unit or several units (with the use of the power units).

The room temperature can be controlled through electronic room thermostats, with different solutions according to every ambient conditions.

The WM-AU, T-MB and WM-S-ECM electronic thermostats control the room temperature precisely and are suitable when the user wants to set the fan speed.

Note: all the controls are described in detail in the "Fan Coil Control Range literature".

(*) To be used with UPM-AU or UP-AU only

TL-ECM-MB VERSION

The MB electronic board, to be mounted on the **TL-ECM-MB** and **TL-ECM-MB-E** versions, is set to carry out different functions and adjustment modes, in order to meet the installation requirements.

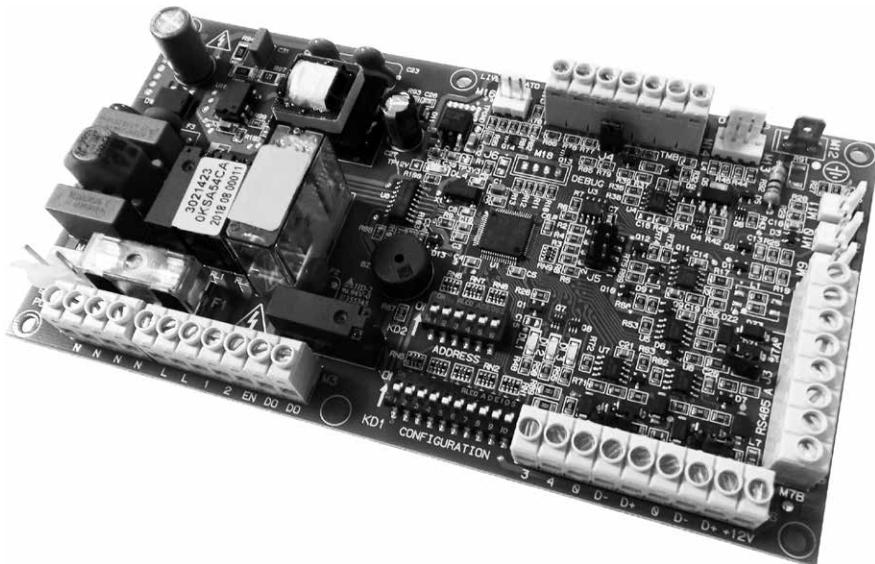

The Dip Switches on the board have to be set to carry out different functions:

- 2/4 pipe unit
- electronic room thermostat for fan control (ON-OFF)
- electronic room thermostat for valve control (ON-OFF) (the fan keeps working)
- simultaneous thermostatic control of the valves and fan
- fan operation control depending on the coil temperature (cut-out T3 probe fitted), which can be activated only in heating mode or heating and cooling mode
- automatic switch of the operating mode by means of T2 water probe (optional) applied on the 2 pipe system

- seasonal switch by means of remote contact
- ON/OFF of the fan coil by means of the remote contact (window or clock contact)
- electric heater control

By activating the cut-out T3 probe function, the fan is stopped in winter when the coil temperature is lower than 32 °C and started when the temperature reaches 36 °C. In summer mode, the fan stops when inside the coil exceeds 22 °C and starts when it drops below 18 °C. The following connections are located on the power board:

- receiver for infra-red remote control
- T-MB wall control
- serial connection to manage several fan coil units in Master/Slave configuration or to create a supervisory network.

CONTROLS FOR TL-ECM-MB UNITS

All the units **TopLine ECM 7-8** can be supplied in **MB** version. This version includes a wide range of controls, including the infra-red remote control, which allow managing one single unit or several units by using the Bus communication protocol.

Units can be managed according to the Master/Slave logic (up to 20 units) or by supervisory components.

The system consists in a MB board and a series of controls, such as the **T-MB** wall control, the **RT03 infra-red remote control**, the **PSM-DI** multifunction control and the **NET** supervisory program.

Note: all the controls are described in detail in the "Fan Coil Control Range literature".
