

United Technologies

PRODUCT SELECTION DATA

- A packaged system, all in one
- Superior reliability
- Save energy and money
- Easy maintenance

Packaged Rooftop Cooling Only Units,
Heat Pumps and Gas Heating Units

48/50UA/UH 135 - 205

48/50 UA/UH

Nominal cooling capacity 131 - 193 kW
Nominal heating capacity 142 - 211 kW

The packaged rooftop units are flexible and efficient air conditioners, designed for outdoor installations. The units are self-contained and can be installed in commercial and industrial applications.

- 50UA/UH units are packaged rooftop cooling units/reversible heat pumps, available with additional heating options (hot-water coil or electric heaters).
- 48 UA/UH units are packaged rooftop cooling units or reversible heat pumps which have been mounted multi-phased gas heaters on.

Environmentally sound refrigerant choice

- R410A refrigerant is
 - a chlorine-free refrigerant of the HFC group with a zero ozone depletion potential,
 - a high-density refrigerant, therefore less refrigerant is required,
 - very efficient: it gives an increased energy efficiency ratio (EER, COP and part load efficiencies).

Features

These new rooftop units integrate the latest technological innovations:

- state-of-the-art scroll compressor technology,
- low-noise fans made of composite material,
- auto-adaptive Touch Pilot microprocessor control with Touch Pilot display
- Variable air volume supply fan optimizing energy consumption at full load and part load
- High efficiency energy recovery wheel with small and large alternatives for each sizes
- 60 mm double skin indoor section for less leakage and low thermal losses.

Superior reliability, efficiency and safety

- State-of-the-art concept
 - Reduced size and weight make these units ideal for today's lightweight building structures.
 - Rugged design of critical components e.g. motor supports, suction/discharge piping etc.
 - Powder-painted sheet metal, especially suitable for outdoor use (light-grey colour RAL 7035).
- Exceptional endurance tests
 - Corrosion resistance tests for polyester powder painted galvanized sheet metal parts in salt mist.
 - Accelerated ageing test on components that are submitted to continuous operation: compressor piping, fan supports.
 - Low vibration design.
 - Transport simulation tested in real conditions.
 - Each model has two independent refrigerant circuits with 2 compressors each which gives good partial load performances and continuous operation in case of failure.
- Leak-tight refrigerant circuit
 - Using the latest refrigerant circuit technology for Carrier Aquasnap chillers:
 - Brazed refrigerant connections for increased leak tightness.
 - Reduction of leaks due to reduced vibration levels and elimination of capillary tubes.
 - Access to pressure transducers and temperature sensors without losing refrigerant charge.
- Compressors
 - Excellent full and part-load efficiencies achieved with multiple scroll compressors and indoor coils with dual refrigerant circuits. The refrigerant circuits are both electrically and mechanically independent, to provide

standby capability should one circuit require service. Totally enclosed outdoor fan motors are designed for many years of trouble-free operation.

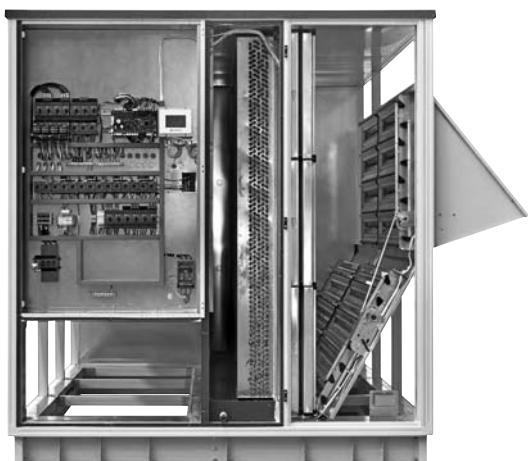

- Increased energy efficiency at part load, around 99% of the operating time. Only compressors that are absolutely necessary operate. At these conditions the compressors operating are more energy-efficient, as they use the total condenser and evaporator capacity.
- Better reliability, superheat control, refrigerant management and efficiency with electronic expansion valve on refrigerant circuits.
- Low-noise scroll compressors with low vibration levels.
- The compressor assembly is installed on an independent chassis and supported by anti-vibration mountings.
- Dynamic suction minimizing vibration transmission.
- Crankcase heaters are standard for all units.

Compressor

- Outside condenser/evaporator coil section
 - Vertical outside coils made of high-quality staggered copper tubing, mechanically bonded in pre-coated corrugated aluminium fins, with high-level protection against corrosion and UV.
 - Latest generation low-noise Flying Bird IV fans, made of a composite material (Carrier patent) - now even quieter and generating intrusive low-frequency noise.
 - At part load or low outdoor temperatures the fan automatically switches to the low speed. The two-speed fan motor allows adjustment of the fan speed for optimized efficiency.
 - Defrost is optimized by the auto-adaptive algorithm. This and the new coil design reduce the defrost cycle duration by an average of 50%. For increased safety an electric heater prevents accumulation of ice on the air heat exchanger base.
 - All pipes and refrigeration components are welded. Pressure sensors are mounted directly on the pipes.
 - Double-inlet indoor fans have forward-curved blades.
 - Intertwined circuiting indoor coils enable better coil efficiency and dependability.

Indoor section

Touch Pilot user interface

Touch Pilot is an advanced numeric control system that combines complex intelligence with great operating simplicity. Touch Pilot constantly monitors all machine parameters, optimizing the operation of compressors, fans and reversing valve for optimum energy efficiency.

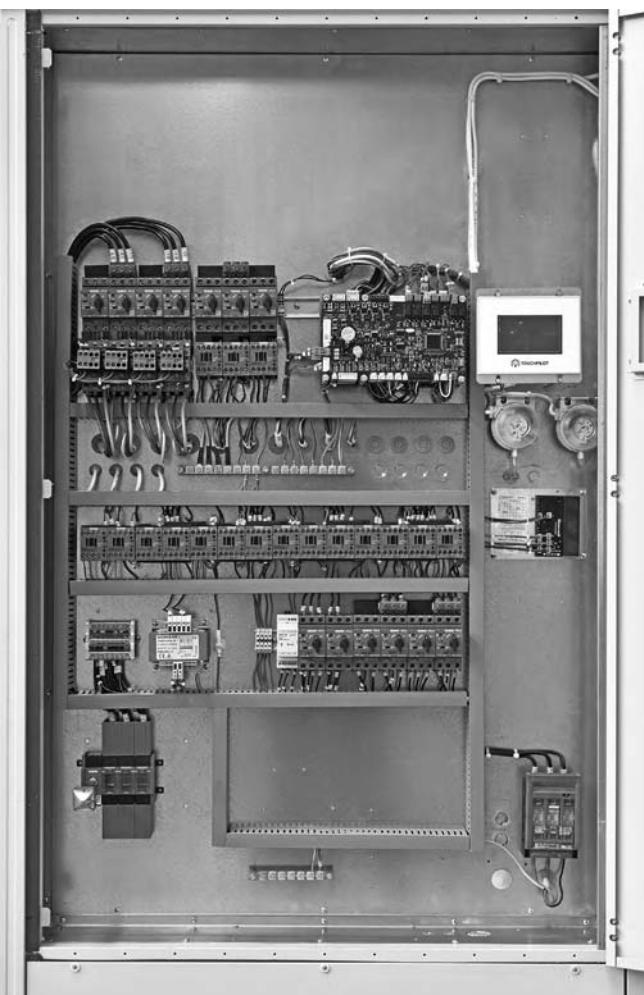

Touch Pilot display

■ Simplified wiring

- Electrical connections are simplified and standard equipment includes a main disconnect switch and a single entry point of the three-phase without neutral power supply to the whole unit.
- The units are fully wired in accordance with EN standards and include thermo-magnetic circuit breakers and a main disconnect switch.
- Transformer for safe 24 V control circuit supply included.
- Easy sensor connections through separate terminal
- Special relay to check phase sequence
- 4.3" Touch Pilot user interface into panel
- Thermic magnetic relays for compressors.

Simplified electrical connections

■ A powerful control system

- Touch Pilot control is auto-adaptive and guarantees total compressor protection. The system permanently checks the operating parameters and responds simultaneously to avoid excessive cycling and maintain the ideal operating range for the compressor (temperatures and pressures out of range, etc.). By taking corrective action before the fault occurs, the auto-adaptive control frequently prevents a shutdown due to a fault.
- Touch Pilot control allows communication via JBus and LonWorks - if the necessary hardware is provided.

■ Energy management

- Internal seven-day time schedule clock permits unit on/off control.
- To optimize power consumption, Touch Pilot automatically resets the space temperature setpoint in accordance with the outdoor air temperature or uses a second setpoint (example: occupied/unoccupied mode).
- Master/slave control of up to six units operating in parallel (a serial RS485 communication port) fault. The zone heat/cool state is determined by the master unit. If a slave unit is in a heat/cool mode which differs from the master then it is forced in fan only mode (accessory).
- Automatic changeover based on the outside air temperature

■ Integrated features

- Night mode: capacity and fan speed limitation for reduced noise levels.

■ Ease-of-use

- Easy access to the controller box with inclined touch screen mounting to ensure legibility under any lighting conditions.
- The information is displayed clearly in English, French, German, Italian or Spanish (for other languages please contact Carrier).
- Unit control with microprocessor with non-volatile memory, picture guided unit/operator interface, the LOCAL/OFF/REMOTE/CCN selector and a 4,3 inches coloured touch-screen display with multiple language capability.

■ Carrier Comfort Network (CCN) operating mode

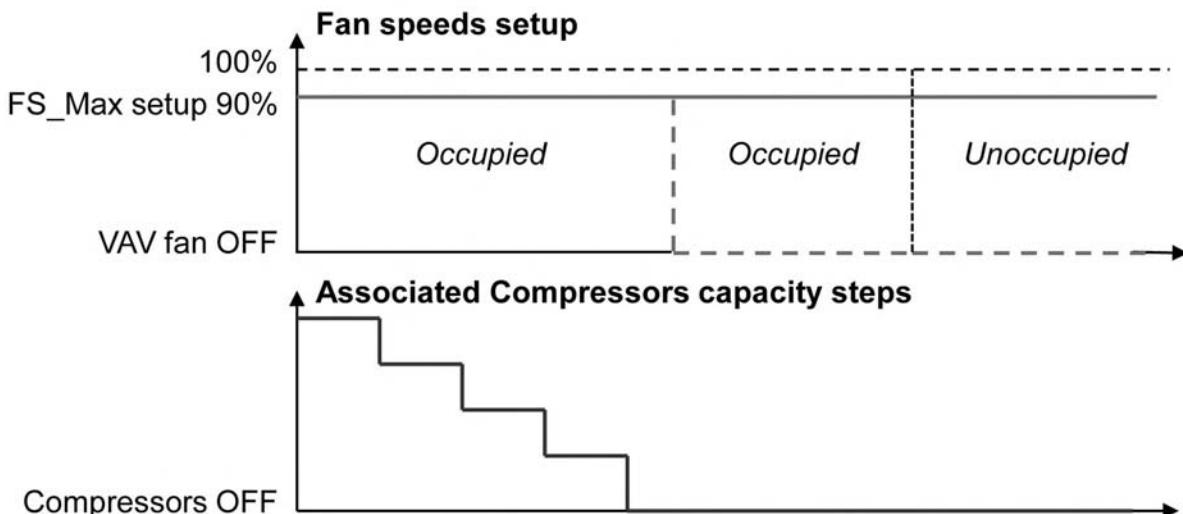

- A simple two-wire communication bus between the RS485 port of the rooftop unit and the Carrier Comfort Network offers multiple remote control, monitoring and diagnostic possibilities. Carrier offers a vast choice of control products, specially designed to control, manage and supervise the operation of an air conditioning system. Please consult your Carrier representative for more information on these products.

- Remote operating mode with volt-free contacts (standard)
 - Start/stop: opening of this contact will shut down the unit.
 - Dual setpoint: closing of this contact activates a second setpoint (example: unoccupied mode).
 - Additional frost protection setpoint is available to protect the building at low temperature.
 - Alarm indication: this volt-free contact indicates and identifies major faults that may lead to the shutdown of one or two refrigerant circuits.
 - Demand limit can be used to reduce the maximum unit capacity to pre-defined values, using volt-free contacts.
 - User safety: this contact can be used for any customer safety loop. Closing the contact generates a specific alarm.
- Remote management (standard)
 - Units with Touch Pilot control can be easily accessed from the internet, using a PC with an Ethernet connection. This makes remote control quick and easy and offers significant advantages for service operations.

Variable Air Volume supply fan option

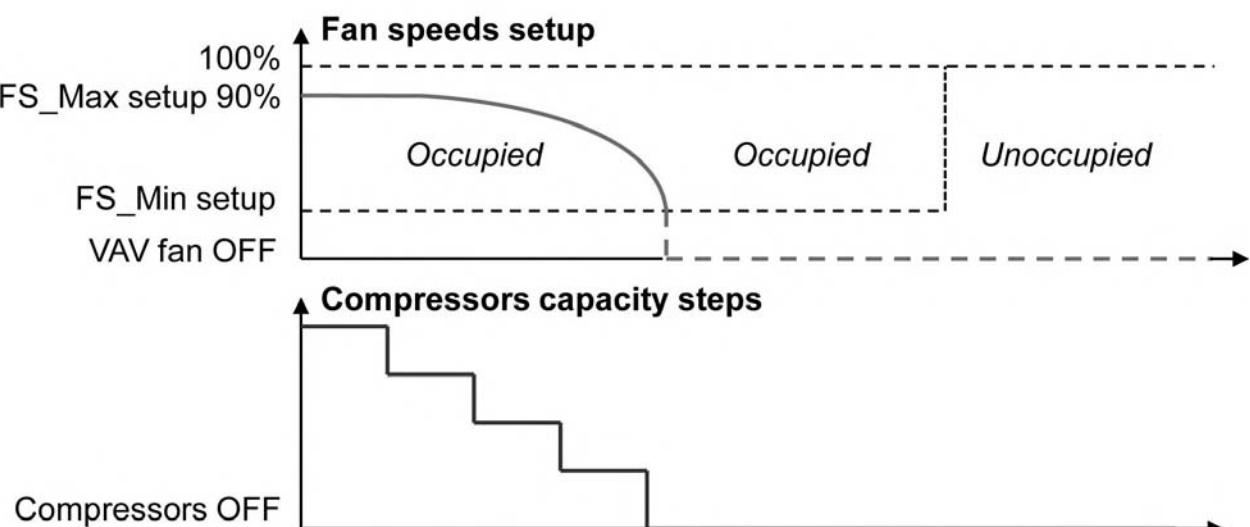

An optional Variable Air Volume supply fan can be selected. This belt driven high static centrifugal fan is driven by a Variable Frequency Drive on motor. The VAV supply fan option is specially designed to ensure economical operation during part load and occupied/unoccupied periods to meet current and future requirements for high-energy efficiency buildings.

- Energy Savings solution
VAV Supply fan option allows fan absorbed power large reduction, improving unit part load efficiencies in cooling and heating modes.
- Constant Volume Operating mode:
 - By choosing Constant Volume mode on ProDialog+ interface the user can optimize the supply fan speed (FS max) to adapt perfectly airflow rates (from 70-100% of unit nominal airflow rate) to airduct pressure drop, therefore reducing fan power consumption.
 - The indoor fan management function lets user cycling the supply fan during occupied or unoccupied periods, the supply fan is always On as default.

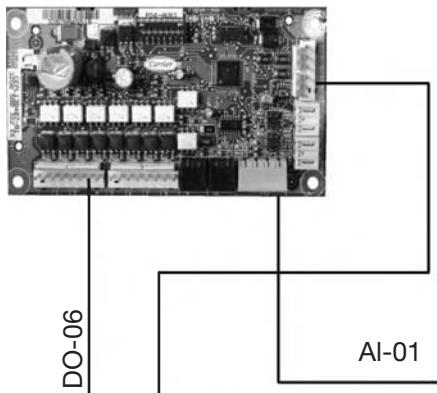

- The user can choose to stop the supply fan during occupied or unoccupied periods when the unit is in standby mode (no compressor) optimizing the Energy savings (dotted lines).
- Constant Volume mode also offers pressure compensation feature: VAV option will compensate airflow drop when the filters get fouled up.

- Variable Air Volume Operating mode:
 - The unit will operate in the variable speed features in cooling & heat pump mode: the unit is automatically determining the minimum airflow needed to provide a satisfying room air temperature, and maximize energy efficiency.

SIOB board

Len bus – Serial link

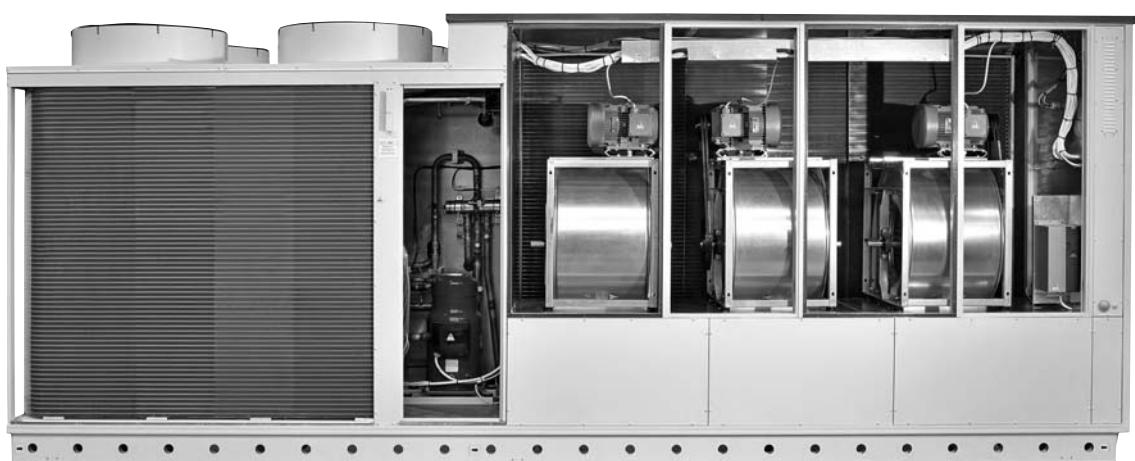

HVAC Drive
(same as ERM)

Return air temperature sensor

Belt driven High Static Fan drive with fixed motor pulleys

IAQ options and economizer

- Fresh air sliding panel
- Manual outdoor air damper
- Economizer
 - An optional integrated economizer permits cooling utilizing an outdoor air sensor.
 - The economizer operates in conjunction with mechanical cooling, when required, and is factory-installed for either vertical or horizontal operation. The factory-supplied and field-installed rain hood/filter assembly is designed to prevent moisture or objects from entering the unit.
 - Touch Pilot control has been designed to support the requirements of indoor air quality control, using outside air. Units can be equipped with a fully modulating economizer. The control includes a logic for a minimum ventilation position.

Economizer

- Thermostatic and enthalpy control with the economizer (option). Two types of control are available:
 - dry-bulb temperature differential,
 - enthalpy differential.

Normally the units provided with an economizer are factory-fitted with an outdoor air and space temperature sensor. For outdoor enthalpy control the economizer is provided with an enthalpy controller and sensors for optimum temperature and humidity control.

- Fresh Air management with Economizer and VAV supply fan options: VAV option will guarantee minimum fresh air quantity setting (%) by opening the economizer damper accordingly to the calibration data, regardless the fan speed value.

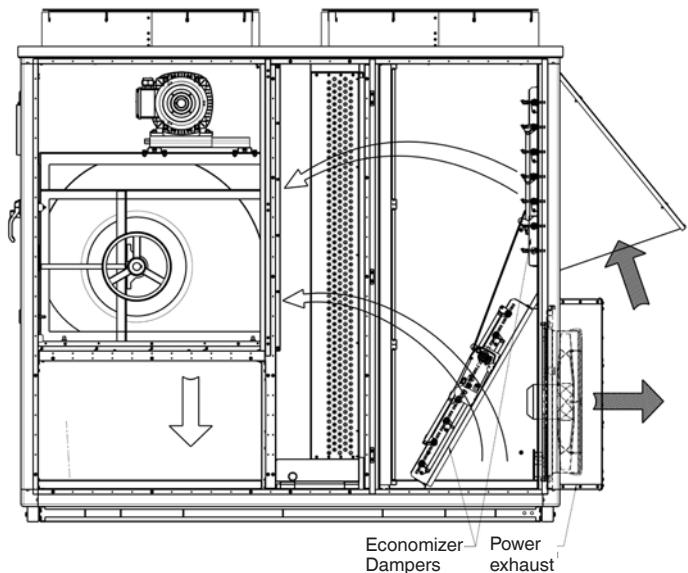

The calibration task will use the following formula to calculate the fresh air rate:

$$\% \text{ of Fresh Air} = (\text{Return Air Temperature} - \text{Supply Air Temperature}) / (\text{Return Air Temperature} - \text{Outdoor Air Temperature})$$

Power exhaust option

- This option prevents space pressurization problems. When operating with outside air economizers, large amounts of air can be introduced into the building and a means for building pressure relief must be provided. The 50 UA/UH series control supports the following three building pressure control types:
 - Barometric relief damper: can be used on low return duct static applications.
 - Centrifugal exhaust fan for exhaust air, running when the fresh air inlet reaches 50% of the fresh air requirement (factory-fitted to the unit).
 - Minimized over-pressure in the building when fresh air is introduced, allows additional exhaust air pressure for medium return ductwork pressure drop.

Power exhaust option

CO₂ sensors

- The indoor air quality (IAQ) function provides a demand-based control for ventilation air quantity, by using a modulating outside air damper position that is proportional to the space CO₂ level. The ventilation damper position is varied between a minimum ventilation level (based on internal sources of contaminants and CO₂ levels other than the effect of people) and the maximum design ventilation level (determined at maximum occupancy of the building).

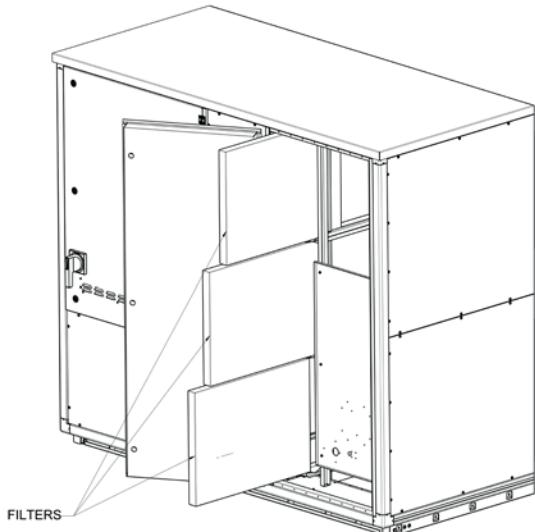

Filtration solutions

- The units can use either standard G4 filters or an optional two-stage pre-filter and G4 + F7 or M6 + F7 high-efficiency filters (all fire class M1). They can also have an optional filter pressure drop switch to warn if the filter is dirty.

Filter section

Filter section

Outdoor air quality	IDA3 (better)	IDA4 (good)
ODA1 (good)	F7	F5
ODA2	F5/F7	F5/M6
ODA3	F5/F7	F5/M6
ODA4 (poor)	M6/F7	F4/M6

The outdoor air is categorized in four levels (ODA1 to ODA4) depending on air pollution through particles and gases.

The indoor air is categorized in four levels. For rooftop applications the most common ones are:

- IDA3 (commercial buildings, cinemas, theatres, restaurants, bars, sport halls)
- IDA4 (industrial buildings and warehouses).

If units are installed in an environment where filters need to be replaced more frequently, it is recommended to use two-stage particle filtration for hygiene reasons.

Fire and smoke control option

- The unit can be equipped with an optional return air smoke detector. The smoke detector is wired to stop the unit and send a message to a remote alarm system if a fault condition is detected. If the control expansion module is added, the control will support smoke control modes including evacuation, smoke purge and pressurization.

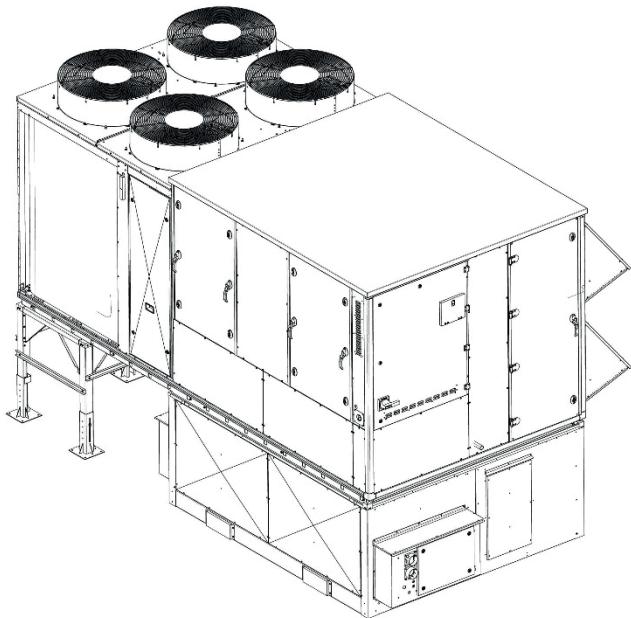

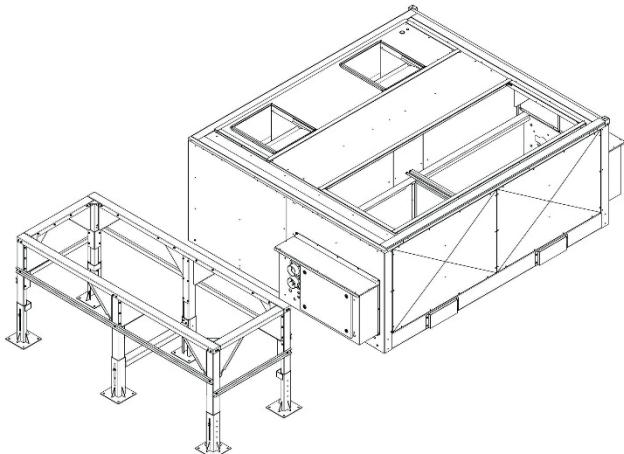

Gas heating solutions (only 48 UA/UH)

- Rooftop units are equipped with condensing and low NOx emission gas heaters confirming Eco Design criteria. Gas heaters provide comfortable and efficient heating low outdoor temperatures as low as – 20 °C. Gas heater modules, delivered inside a roofcurb installed at the factory, can be easily installed under the unit at site.
- They can be selected as an alternative heating source for both cooling only (UA series) and heat pump (UH series) units.
- Carbon monoxide emission of premix burner is zero (CO=0), and NOx emission is very low (NOx < 30 ppm- Class 5). Burning efficiency up to 109%, condensing technology and proportional control provides both sensitive comfort and efficiency.
- Consumes low LNG providing heating demand in the range of 22/23-100 % with 0 – 10 V capacity control.
- With its combustion chamber, heat exchanger, premix burner where air and gas gets mixed, gas heater is provided as a package with CE certificate from the manufacturer. (2009/142/CE, 2006/42/CE, 2006/95/CE, 2004/108/CE)
- Combustion chamber and complete heat exchanger is made of AISI 441 stainless steel, providing long service life and reliability.
- Gas heaters are equipped with a manual reset safety thermostat for safety reasons.
- Some of other safety and control devices are; ignition and flame detection electrodes, electronic ignition device for the burner and flame ionisation control device. Microprocessor based electronic board regulates heat output and controls fan and gas valve for air/gas mixture.

Gas heater module

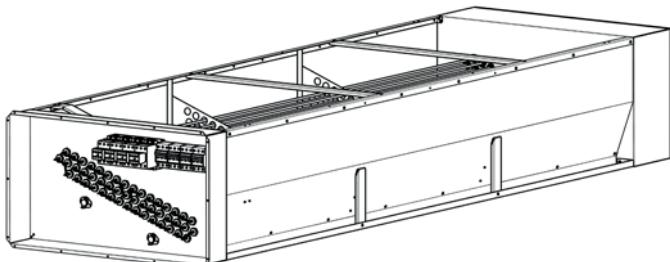

Gas heater inside roofcurb

Electric heater option

- The electric heater is located after the main thermodynamic coil and guarantees constant and comfortable supply air temperature in winter. This option also enhances comfort when the heat pump is operating in the defrost cycle.
- Each 50 UA/UH rooftop unit can be fitted with a choice of three electric heater options offering two control stages.
- Shielded electric resistance heaters are fully factory-wired and tested. Each stage is protected against overloads by two thermal protectors. The low-limit protector with automatic reset is located above the resistance heaters while the high-limit protector with manual reset is located in the heater control box. This high-temperature limit control offers overload protection and is set to 90°C. It is located less than 150 mm after electric heaters.

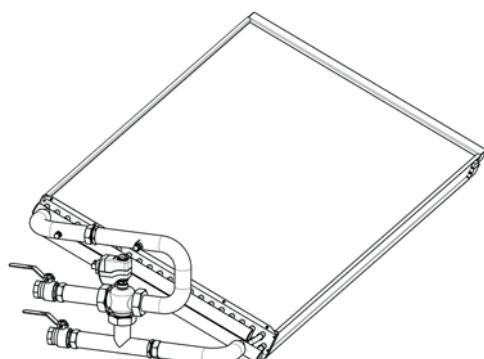

Electric heater

Hot-water coil with three-way valve option

- The hot-water coil is located after the main thermodynamic coil and guarantees constant and comfortable supply air temperature in winter. It allows fully modulated heating capacity, using a three-way valve, protected by a frost protection sensor. This option allows high-capacity heating.
- The hot-water coils offer a fully modulating proportional three-way valve as standard, with supply air temperature-based control. They also include two isolating shut-off valves and are factory-fitted, wired and fully factory-tested. Frost protection is provided by a low-temperature sensor and the coils are equipped with a purge system.

Hot-water coil

Return air fan option

- Allows additional return air pressure for the return air ductwork, minimizing overpressure in the building when fresh air is introduced. Also permits manual or automatic system air pressure balancing in the building.
- This option assists the supply fan to overcome the return-side pressure drop while running in series with the supply fan. It is fitted with a damper to exhaust excessive air due to fresh air usage. The exhaust air damper can be manually or automatically adjusted, based on the fresh air options. The return air fan is shipped loose, but separately functionally tested before leaving the factory.
- The associated supporting frames, ductwork, cables for mechanical and electrical connection needs to be field-supplied. The drive is factory-set in accordance with the return air fan performance tables. When indoor pressure and air flow requirements differ from the nominal ratings, the motor pulley can be adjusted for different available static pressure values.
- The return fan option can also be supplied with a frequency inverter.

Return fan inside roofcurb

Energy recovery module (ERM)

There are two types of ERM's per each rooftop size; Small & Large ERM. Small ERM permits fresh air up to 50% and Large ERM up to 100%. The ERM is an individual dual-flow unit, equipped with a high-efficiency Eurovent-certified air-to-air heat recovery wheel with 63% to 88% efficiency, an integrated variable-air-volume plug fan and a control system for plug-and-play installation. The modules are specially designed to ensure economical indoor air extraction and to take in fresh air to meet current and future requirements for high-energy-efficiency buildings.

- The unit cabinet is made of galvanized and powder-painted sheet metal, specially suitable for outdoor use, for corrosion protection (light-grey colour RAL 7035).
- The ERM is fitted with G4 filters on the fresh-air side as standard to protect the heat recovery wheel against dust.
- Power and control wiring between the ERM and the rooftop unit is supplied by the factory.
- All ERM's are directly connected to the rooftop unit without any duct.
- Energy savings
 - The heat exchanger reclaims up to 88% of the heat from the extract air and transfers it to the supply air, considerably reducing the thermal load on the heating and air conditioning equipment.
 - High-efficiency plug fans for exhaust air. The direct-drive fans do not suffer any belt and pulley drive losses. They are more energy-efficient and require less maintenance. The exhaust air fan speed is independently controlled by frequency inverters directly connected to the Pro-Dialog+ controller inside the rooftop unit.
 - When outside conditions permit, the control system continuously adjusts the fan speed to minimize power consumption.

High-efficiency heat recovery wheel

■ Energy recovery benefits

Quick and easy plug-and-play installation:

- The ERM option is delivered as a single piece for fast installation, separate from the rooftop units.
- To facilitate installation, the ERM is factory-fitted with a terminal block for the power and control wiring for easy connection to the rooftop units (wiring to be supplied by the installer). The control box and the sensors are factory installed and tested for fast and trouble-free start-up.

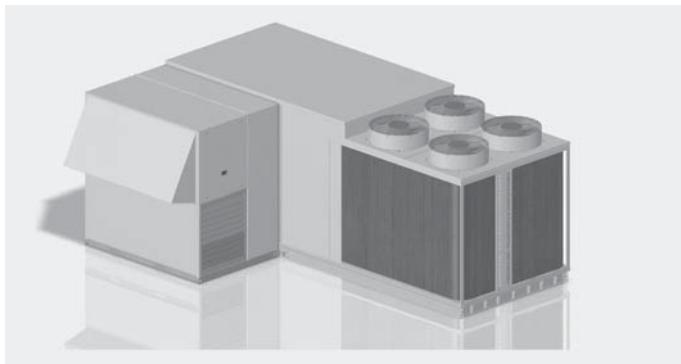

Control and safety devices

■ An integrated motion detector ensures that the ERM control generates an alarm signal if the heat recovery wheel stops.

- The plug fan pressure differential sensor transmits an alarm signal if the fan stops.
- A barometric exhaust air damper prevents air and water infiltration when the exhaust fan is switched off.

■ VAV supply fan option & Energy Recovery Module:

- When the ERM status is Heat or Cool recovery modes, in order to maintain minimum fresh air requirement with variable air volume, mixed air temperature method is used for minimum fresh air quantity setting (%), using calibration task method.
- During 100% free cooling ERM mode, in order to balance with increased pressure drop of rotary wheel (reducing supply flow), VAV option mode will be automatically switched to Constant Volume mode during free cooling allowing pressure drop compensation.

Wheel material for heat recovery can be selected as condensation or sorption type. Sorption type wheels are effective for more heat recovery by drawing from the latent heat of outside air, especially in areas with high humidity.

Serviceability

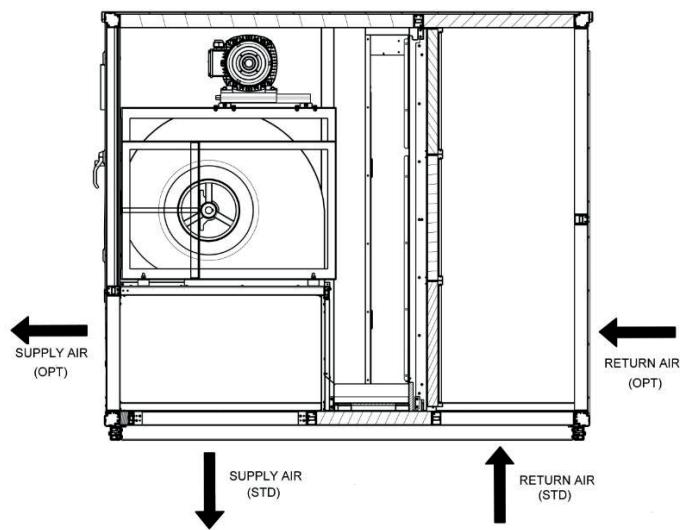

■ Installation, serviceability and fast commissioning

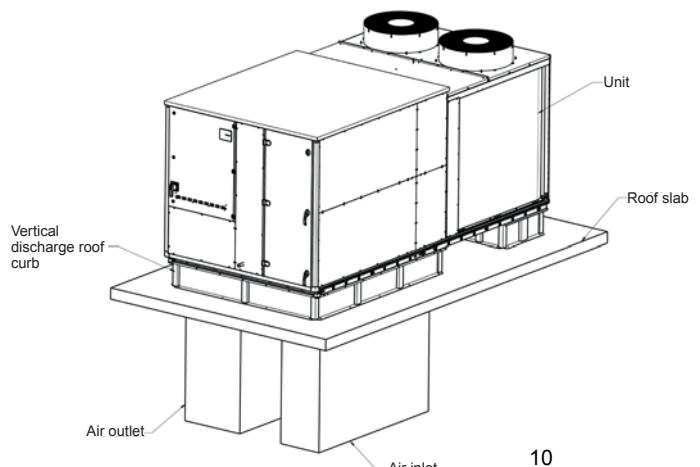

- The 50/48 UA/UH unit design facilitates fast field-conversion. Single-point electrical connections are standard on all units. Service access to the electrical components can be through the roof curb or unit side.
- Systematic factory run test before shipment
- Quick-test function for step-by-step verification of instruments, electrical components and motors.
- All units are equipped with the Touch Pilot control system as standard, with information displayed clearly in English, French, German, Italian and Spanish. Touch Pilot menu allows quick access to all main operating parameters including: number of compressors on, suction/relief pressure, compressor operating time, set-points, air temperature, entering/leaving water temperature.
- The controls are compatible with either a room sensor or a conventional thermostat with no need to install an accessory interface. No special tools are required to run the unit through its operational steps.
- The unit can be run-tested before an installation is complete to ensure smooth start-up. Hinged access panels offer easy maintenance access to all standard serviceable components. No fasteners need to be removed; this reduces service time and helps prevent roof leaks caused by discarded screws. Colour-coded wiring permits easy tracing and diagnostics.

Roofcurb

The 50 UA/UH units leave the factory with the air discharge and return in the lower unit section. The unit can be shipped also as bottom supply/side return, side supply/bottom return or side supply/side return according to selected options.

Fixed vertical roof curb

Options

Option	No	Description	Advantage	Use
Electric Heaters				
Electric heater 9+9+9+18 kW	174	Electric heater coil is an auxiliary heating solution on cooling only and reversible units	Electric heater located after the main thermodynamic coil, guarantees constant and comfortable supply air temperature in winter. This option is also improving comfort while heat pump is operating in defrost cycle.	50UA-UH 135, 160
Electric heater 18+18+18+18 kW	175			50UA-UH 135, 160
Electric heater 27+27+27+27 kW	176	for low mixed air temperature (high fresh air rate in winter).		50UA-UH 135, 160
Electric heater 9+9+18+18 kW	177			50UA-UH 180, 205
Electric heater 18+18+27+27 kW	178			50UA-UH 180, 205
Electric heater 36+36+36+36 kW	179			50UA-UH 180, 205
Hot Water Coils				
Hot water coil low with 3 way valves	180	Hot water coil is an auxiliary heating solution on cooling only and reversible units for low mixed air temperature (high fresh air rate in winter).	Hot water coil located after the main thermodynamic coil, guarantees constant and comfortable supply air temperature in winter. It allows full modulating heating capacity throughout the use of 3 way valve, secured by frost protection sensor.	50UA-UH 135, 160
Hot water coil high with 3 way valves	181			50UA-UH 135, 160
Hot water coil low with 3 way valves	182			50UA-UH 180, 205
Hot water coil high with 3 way valves	183			50UA-UH 180, 205
Gas modules				
Natural Gas 160 kW in vertical roofcurb - Modulating	210	Gas burner is an auxiliary heating solution on cooling only and reversible units for low mixed air temperature (high fresh air rate in winter).	Gas burners are located after the main thermodynamic coil, guarantees constant and comfortable supply air temperature in winter. It allows modulating heating capacity from 22-23% to 100%. This option allow high capacity heating solution.	48UA-UH 135, 160
Natural Gas 194 kW in vertical roofcurb - Modulating	211	On heatpump unit, modulated type gas heater can be used as primary heater(default) or backup heater.		48UA-UH 180, 205
Coil Protection Options				
Outdoor Precoated / Indoor Standard	154	Coils fins made of UV resistant polyurethane protection pretreated aluminium.	Improved corrosion resistance, extending the ALL coil life time.	
Outdoor Precoated / Indoor Precoated	153			
Fresh Air & Economizer Outdoor Air Options				
Manual outdoor air damper	40	Manual adjustable setting of permanent amount of fresh air up to 40 %. Fresh air hood also supplied.	Fresh air supply in the building with constant ALL adjustable rate.	
Economizer, thermostatic control	35	Direct link driven low leakage blades to control fresh air percentage up to 100 % Vs return air. Indoor & Outdoor air temperature sensors are supplied. Fresh air hood also supplied.	Fresh air supply in the building with variable rate, depending on outside air temperature temperature. Allow free cooling operation for energy saving based on temperature differential control.	
Economizer, enthalpy control	36	Direct link driven low leakage blades to control fresh air percentage up to 100 % Vs return air. Indoor & Outdoor Air enthalpy sensors are supplied. Fresh air hood also supplied.	Fresh air supply in the building with variable rate, depending on outside air enthalpy (temperature & humidity level). Allow intelligent free cooling operation for energy saving based on enthalpy differential control.	
Economizer, thermostatic + CO ₂ sensor control	156	Direct link driven low leakage blades to control fresh air up to 100 % vs return air. Indoor & Outdoor air temperature sensor supplied. Indoor Air Quality CO ₂ sensor supplied. Fresh air hood also supplied.	Fresh air supply in the building with variable rate, depending on outside air temperature. Allow free cooling operation for energy saving based on temperature differential control. Manage CO ₂ concentration levels in the building.	
Economizer, enthalpy + CO ₂ sensor control	157	Direct gear driven low leakage blades to control fresh air percentage Vs return air. Indoor & Outdoor Air Temperature & Humidity sensors supplied. IAQ CO ₂ sensor supplied. Fresh air hood also supplied.	Fresh air supply in the building with variable rate, depending on outside air temperature & humidity level. Allow intelligent free cooling operation for energy saving based on enthalpy differential control. Manage CO ₂ concentration levels in the building.	
Supply fan options				
High static pressure 1 (CAV)	150	Oversized fan and motors configuration	Various fan motor kits allow large choice of airflow rates & External static pressures runing points.	ALL
High static pressure 2 (CAV)	151			
Standard with soft starter (CAV)	165	Gradual supply fan motor starting.	Progressive supply fan start to reduce noise and starting current.	
High static pressure 1 with soft starter (CAV)	166	Oversized fan and motors configuration + gradual supply fan motor starting time.		
High static pressure 2 with soft starter (CAV)	167			
Variable Air Volume with VFD drive (VAV)	169	Fan and motor assembly with Variable Frequency Drive offering Variable Air Volume management.	VFD fan motor offers energy saving in part load operations with variable airflow rates, External Static Pressures adjustment, and multiple operating modes.	
Filter Options				
Standard G4 filter (not classified)		G4 filters synthetic media 50 mm cartridge frame with 90 % gravimetric efficiency and high filtration area.	High efficiency filtration for return air and fresh air with low pressure drop. No fire classification.	ALL
G4 Filter M1 fire class	145	G4 filters synthetic media 50 mm metallic frame with 90 % gravimetric efficiency and high filtration area.	High efficiency filtration for return air and fresh air with low pressure drop with fire classification M1.	
F7 Filter M1 fire class	147	F7 filters synthetic media 50mm metallic frame with 90% opacimetric efficiency and high filtration area.	High efficiency filtration for return air and fresh air with low pressure drop with fire classification M1.	
G4 + F7 Filter M1 fire class	158	Two-stage particle filtration G4 & F7	Two stage high efficiency filtration for return air and fresh air with medium pressure drop with fire classification M1. Replaceable media G4.	
M6 + F7 Filter M1 fire class	159	Two-stage particle filtration M6 & F7	Two stage very high efficiency filtration for return air and fresh air with medium pressure drop with fire classification M1. Replaceable media M6.

Option	No	Description	Advantage	Use
Drain pan options				
Standard		Painted galvanised steel sloped drain pan with connection to a drain pipe.	Standard easy draining of condensation water.	ALL
Stainless steel pan	72	Stainless steel sloped drain pan with connection to a drain pipe.	Easy cleaning drain pan for hygienic purpose & easy draining of condensation water.	
Energy Recovery options				
Energy recovery module_Condensation-Large (supplied separately)	160	The large ERM that permits fresh air upto 100%, is an individual dual-flow unit, equipped with a high-efficiency air-to-air EUROVENT certified heat recovery condensation wheel efficiency 63% to 88%, with integrated variable exhaust air volume plug fan and a control system for a plug & play installation and connection to the roof top electrical box.	Energy saving solution when units operates with fresh air rate in extreme outdoor temperature (winter or summer) allowing energy recovery from exhaust air and transfer to fresh-air side. Reduced installed cooling or heating unit capacity. Allows 100% free cooling solution.	ALL
Energy recovery module_Condensation-Small (supplied separately)	173	The small ERM that permits fresh air upto 100%, is an individual dual-flow unit, equipped with a high-efficiency air-to-air EUROVENT certified heat recovery condensation wheel efficiency 63% to 88%, with integrated variable exhaust air volume plug fan and a control system for a plug & play installation and connection to the roof top electrical box.	Energy saving solution when units operates with fresh air rate in extreme outdoor temperature (winter or summer) allowing energy recovery from exhaust air and transfer to fresh-air side. Reduced installed cooling or heating unit capacity. Allows 50% free cooling solution.	
Energy recovery module_Sorption-Large (supplied separately)	200	The large ERM that permits fresh air upto 100%, is an individual dual-flow unit, equipped with a high-efficiency air-to-air EUROVENT certified heat recovery sorption wheel efficiency 63% to 88%, with integrated variable exhaust air volume plug fan and a control system for a plug & play installation and connection to the roof top electrical box.	Energy saving solution when units operates with fresh air rate in extreme outdoor temperature (winter or summer) allowing energy recovery from exhaust air and transfer to fresh-air side. Reduced installed cooling or heating unit capacity. Allows 100% free cooling solution.	ALL
Energy recovery module_Sorption-Small (supplied separately)	201	The small ERM that permits fresh air upto 100%, is an individual dual-flow unit, equipped with a high-efficiency air-to-air EUROVENT certified heat recovery sorption wheel efficiency 63% to 88%, with integrated variable exhaust air volume plug fan and a control system for a plug & play installation and connection to the roof top electrical box.	Energy saving solution when units operates with fresh air rate in extreme outdoor temperature (winter or summer) allowing energy recovery from exhaust air and transfer to fresh-air side. Reduced installed cooling or heating unit capacity. Allows 50% free cooling solution.	
Return/Exhaust Air Options				
Barometric exhaust	71	Aluminium blades closing by gravity protecting exhaust from rain.	Allow pressure relief when fresh air is introduced in a building with good air tightness.	ALL
Power exhaust 2x1,5 HP air flow 12.000 m ³ /h, 200Pa	184	Exhaust axial fan working in parallel to provide medium exhaust air pressure, running while fresh air inlet higher than 50 % open.	Minimised overpressure in the building when fresh air is introduced. Allows additional exhaust air pressure for return ductwork medium pressure drop.	48/50UA-UH 135, 160
Power exhaust 3x1,5 HP air flow 18.000 m ³ /h, 200 Pa	185	Fixed air flow, factory mounted on the unit. Including Barometric exhaust option 71.		48/50UA-UH 180, 205
Return fan with manual exh. damper in vertical roofcurb (shipped loose)	196	Return centrifugal fan to provide high return air pressure, adjustable air flow rate with variable pulley.	Allow additional return air pressure for return ductwork. Minimised overpressure in the building when fresh air is introduced. Allow manual system air pressure balancing in the building	48/50UA-UH 135, 160
Return fan with manual exh. damper in vertical roofcurb (shipped loose)	197	Adjustable exhaust damper with low leakage blades to adjust exhaust air flow rate. Available only with Options 40 or 118.		48/50UA-UH 180, 205
Return fan with motorized exh. damper in vertical roofcurb (shipped loose)	198	Return centrifugal fan to provide high return air pressure, adjustable air flow rate with variable pulley.	Allow additional return air pressure for return ductwork. Minimized overpressure in the building when fresh air is introduced. Allow automatic system air pressure balancing in the building	48/50UA-UH 135, 160
Return fan with motorized exh. damper in vertical roofcurb (shipped loose)	199	Motorized exhaust damper with low leakage blades to adjust exhaust air flow rate. Available only with Options 35, 36, 156, 157.		48/50UA-UH 180, 205
Return fan with motorized exh. damper in vertical roofcurb;VAV;(shipped loose)	205	Return centrifugal fan to provide high return air pressure, adjustable air flow rate with VFD drive in parallel with supply fan..	Allow additional return air pressure for return ductwork. Minimized overpressure in the building when fresh air is introduced. Allow automatic system air pressure balancing in the building with energy saving	48/50UA-UH 135, 160
Return fan with motorized exh. damper in vertical roofcurb;VAV;(shipped loose)	206	Motorized exhaust damper with low leakage blades to adjust exhaust air flow rate. Available only with Option 169 and Options 35, 36, 156, 157.		48/50UA-UH 180, 205

Options

Option	No	Description	Advantage	Use
Temperature sensors options				
Standard, space sensor T55		T55 sensor to monitor room temperature	Supply air temperature control based on room temperature.	ALL
Space sensor with override & setpoint adjustment T56	19	T56 sensor to monitor room temperature and provide a temperature offset of 3 K maximum.	Room air temperature control with override and setpoint adjustment.	ALL
Space sensor with display, override, on/off and setpoint adjustment.	24	Room temperature sensor with occupied period extension (up to 4 hours), setpoint adjustment and on/off functions.	Room air temperature control with override, setpoint adjustment and display.	ALL
Two space sensor T55 + T56	57	Twin sensors T55 & T56 supplied		ALL
Two space sensor T55 + OPT24	59	Twin sensors T55 & OPT24 supplied		ALL
Duct temperature sensor	18	Duct sensor to monitor air return temperature	Allows direct temperature control on return air duct.	ALL
Communication Options				
CCN/Jbus Gateway	26	Two-directional communications board, complies with Jbus communication protocol	Easy connection by communication bus to a Building Management System	ALL
CCN/Lon Gateway	27	Two-directional communications board, complies with LonTalk communication protocol	Easy connection by communication bus to a Building Management System	ALL
CCN/BACnet Gateway	161	Two-directional communications board, complies with BACnet communication protocol	Easy connection by communication bus to a Building Management System	ALL
Air Flow Safeties				
Dirty filter detection (pressure switch)	96	Alarm reported by adjustable differential pressure switch connected to Touch Pilot controller.	Easy filter maintenance by checking the filter pollution level, improving energy efficiency	ALL
Supply air flow detection (pressure switch)	99	Alarm reported by adjustable differential pressure switch connected to Touch Pilot controller.	Fan checking is "On"	ALL
Dirty filter alarm and Supply air flow detection	162	Combination of options 96 and 99	Filter pollution level and fan checking is "On"	ALL
Smoke Detection				
Smoke detector	97	Generates general unit default of the unit when smoke is detected, economizer return air damper is closed, supply fan is stopped, electric heaters/hot water/gas burners are switched off. Only available with Economiser options.	Building fire security based on smoke detection.	ALL
Smoke detector + DAD (French ERP regulation)	110	Generates general unit default of the unit when smoke is detected, economizer return air damper is closed, supply fan is stopped, electric heaters/hot water/gas burners are switched off. DAD additional functions. Only available with Economizer options.	Building fire security based on smoke detection DAD security device.	ALL
Fire thermostat	121	Generates general default of the unit when thermostats detect return air temperature above adjustable temperature (factory set to 70 °C) Manual reset thermostat placed in return air duct.	Building fire security based on temperature rise detection.	ALL
Smoke detector + Fire thermostat	207	Combination of OPT 97 & 121	Combination of OPT 97 & 121	ALL
Duct Connection				
Fixation frame	163	Metalic rigid frame on air return & supply sides	Easy air duct installation	ALL
Bottom supply + Side return	186	Supply duct connection from bottom and return duct connection from side	Provide an easy and cost effective rooftop installation and easy connection to the different return and supply duct configurations	ALL
Side supply + Bottom return	187	Supply duct connection from side and return duct connection from bottom		
Side suply + Side return	188	Supply duct connection from side and return duct connection from side		
Packaging				
Pallet + coil protection + plastic wrap (Standard)	128	Packaging with pallet + coil protection + plastic wrap	Unit protection for transport	ALL
70 % open crate + coil protection + plastic wrap		Packaging with 70 % open crate + coil protection + plastic wrap	Unit protection for long distance transport	ALL
Accessory	Part No	Description	Advantage	Use
Roofcurb				
Roofcurb	57350017810	Galvanised steel 2 mm thick frame for vertical supply & vertical return air.	Provide an easy and cost effective weatherproof sealed rooftop installation and easy connection to the air duct.	50UA-UH 135-160 50UA-UH 180-205
Room Thermostats				
Programmable Room Thermostat	57260040001	Wall-mounted, low-voltage thermostat maintains room temperature by controlling the rooftop operation	User friendly remote control of rooftop units with schedule programming	50UA-UH135-205
Non-Programmable Room Thermostat	57260040002	Wall-mounted, low-voltage thermostat maintains room temperature by controlling the rooftop operation	User friendly remote control of rooftop units	50UA-UH135-205
Compressor Insulation				
Compressor Blanket	57340010014 57340010015 57340010016	Compressor insulation	Avoid insufficient oil temperature at compressor sump due to the cold weather	48/50UA-UH 135-160 48/50UA-UH 180 48/50UA-UH 205

* Maximum instantaneous start-up current at operating limit values (maximum operating current of the smallest compressor(s) + fan current + locked rotor current of the largest compressor).

** Power input, compressors and fans, at their operating limits and nominal voltage of 400 V (data given on the unit nameplate).

*** Standardised Eurovent conditions: indoor air wet bulb 19 °C, outside air temperature 35 °C with standard fan performance

**** Maximum unit operating current at maximum unit power input and 400 V (values given on the unit nameplate).

† Standard unit (without any options and accessories)

Electrical data notes and operating conditions

- 48/50 UA/UH 135 - 205 units have a single power connection point located at the main switch.
- The control box includes the following standard features:**
 - a main disconnect switch,
 - starter and motor protection devices for each compressor, fans and electric heater option,
 - the control devices.
- Field connections:**
 - All connections to the system and the electrical installations must be in full accordance with all applicable local codes.
 - The Carrier 48/50 UA/UH 135 - 205 units are designed and built to ensure conformance with these codes.

The recommendations of European standard EN 60204-1 (machine safety - electrical machine components. part 1: general regulations - corresponds to IEC 60204-1) are specifically taken into account, when designing the electrical equipment.

Notes:

- Generally the recommendations of IEC 60364 are accepted as compliance with the requirements of the installation directives. Conformance with EN 60204 is the best means of ensuring compliance with the Machines Directive §1.5.1.
- Annex B of EN 60204-1 describes the electrical characteristics used for the operation of the machines.

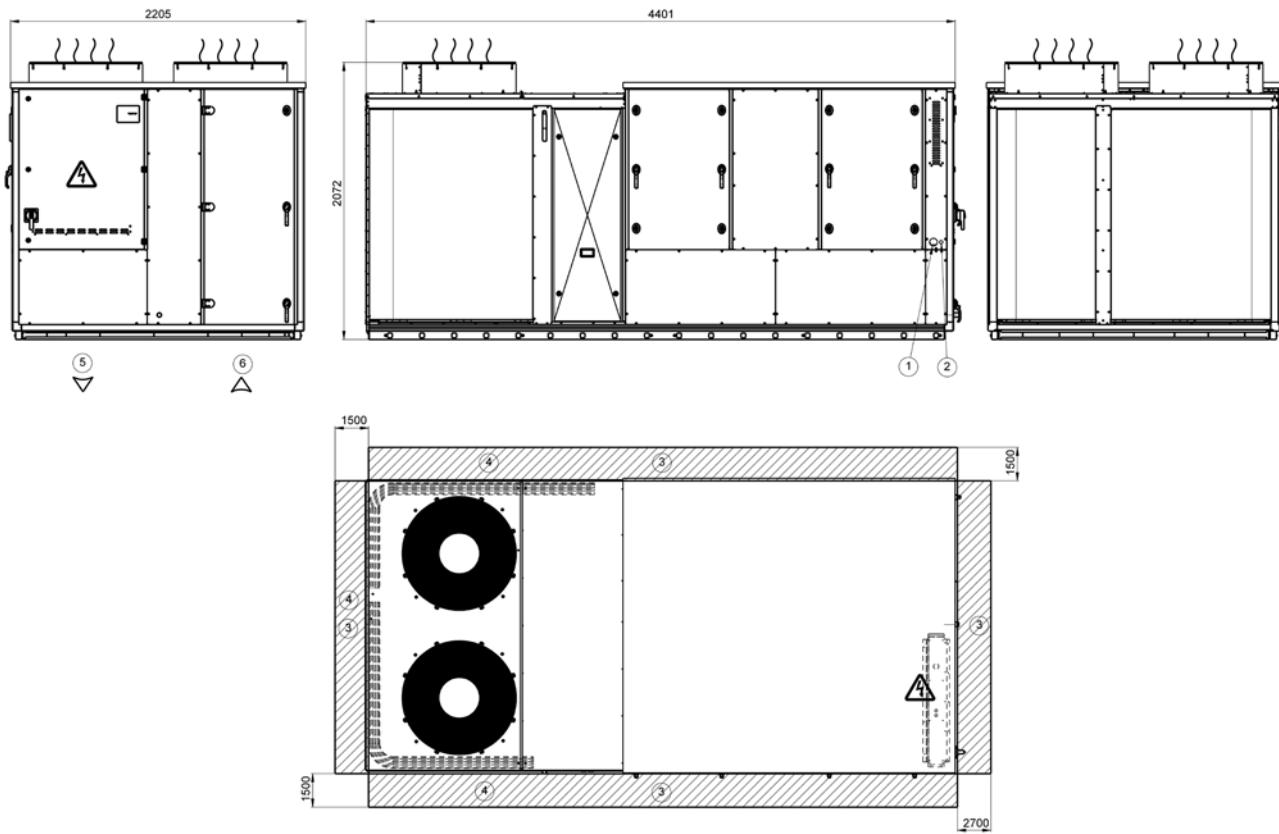

1. The operating environment is specified below:
 - a) Environment* - Environment as classified in EN 60721 (corresponds to IEC 60721):
 - outdoor installation (IP43),
 - ambient temperature range: -20 °C to +52 °C,
 - altitude: ≤ 2000 m,
 - b) Competence of personnel. class BA4 (trained personnel - IEC 60364)
2. Power supply frequency variation: ± 2 Hz.
3. The neutral (N) conductor must not be connected directly to the unit (if necessary use a transformer).
4. Overcurrent protection of the power supply conductors is not provided with the unit.
5. The factory-installed disconnect switch(es)/circuit breaker(s) is(are) of a type suitable for power interruption in accordance with EN 60947.
6. The units are designed for connection to TN networks (IEC 60364). For IT networks the earth connection must not be at the network earth. Provide a local earth, consult competent local organisations to complete the electrical installation.

CAUTION:

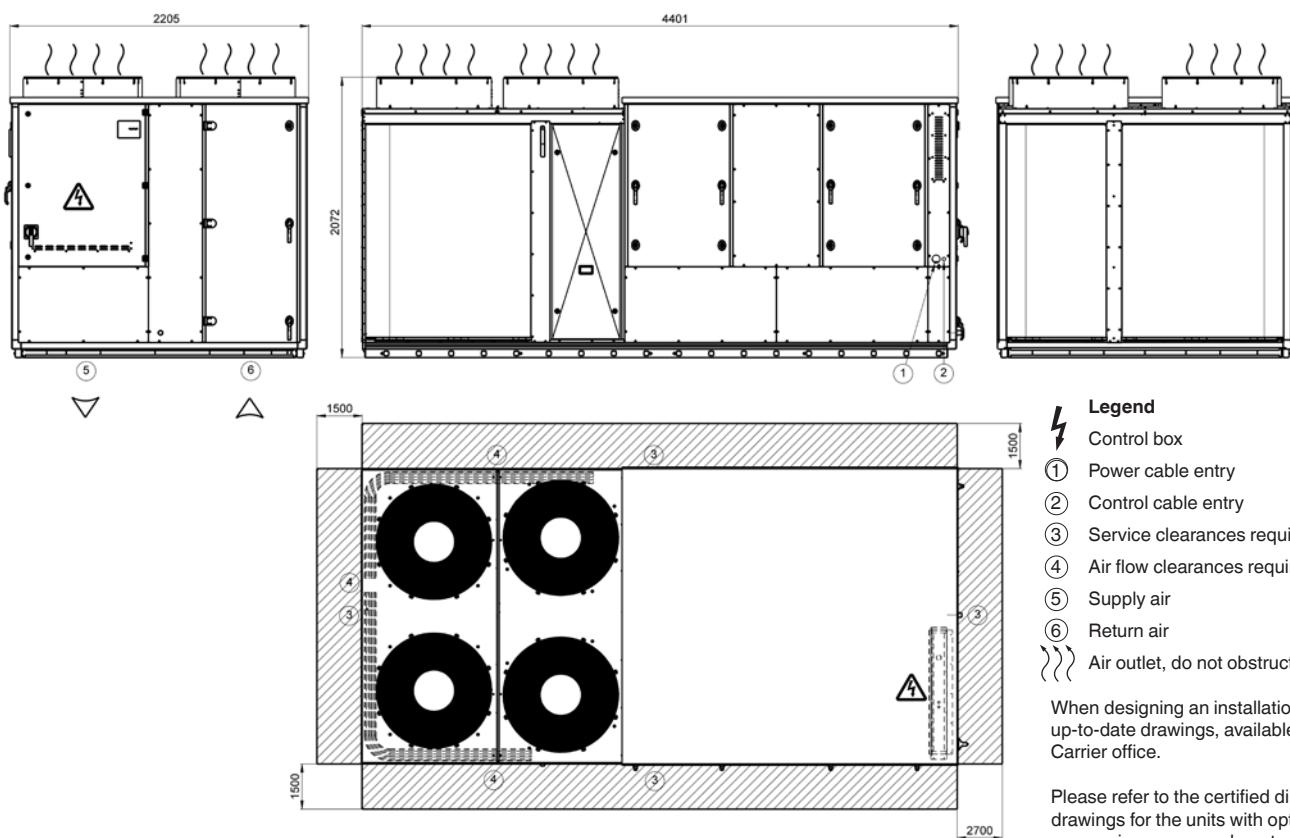

If particular aspects of an actual installation do not conform to the conditions described above, or if there are other conditions which should be considered, always contact your local Carrier representative.

cc: Cooling Capacity (kW)

ht: Energy recovery modul temperature efficiency (%)

humid eff: Energy recovery modul humidity efficiency (%)

ODDB: Outdoor air dry bulb temperature (°C)

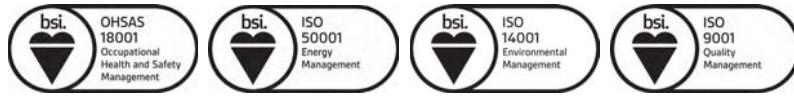

IDDB: Indoor air dry bulb relative humidity (%)

Out DB: ERM outlet air dry-bulb temperature (°C) - before rooftop inlet -

Out RH: ERM outlet air relative humidity (%) - before rooftop inlet -

Order No.: 10118. 01.2018. Supersedes order No.: 10118. 02.17 Manufacturer reserves the right to change any product specifications without notice. The cover photo is solely for illustration purposes and is not contractually binding.

Manufactured by: Alarko-Carrier. Gebze, Turkey.
Printed in the European Union.
